## **Critical Periods:**

*Critical Periods* John Paul Scott, 1978      **Language, Memory, and Cognition in Infancy and Early Childhood**  
Janette B. Benson, Marshall M. Haith, 2010-05-22 Language cognition and memory are traditionally studied together prior to a researcher specializing in any one area They are studied together initially because much of the development of one can affect the development of the others Most books available now either tend to be extremely broad in the areas of all infant development including physical and social development or specialize in cognitive development language acquisition or memory Rarely do you find all three together despite the fact that they all relate to each other This volume consists of focused articles from the authoritative Encyclopedia of Infant and Early Childhood Development and specifically targets the ages 0 3 Providing summary overviews of basic and cutting edge research coverage includes attention assessment bilingualism categorization skills critical periods learning disabilities reasoning speech development etc This collection of articles provides an essential affordable reference for researchers graduate students and clinicians interested in cognitive development language development and memory as well as those developmental psychologists interested in all aspects of development Focused content on age 0 3 saves time searching for and wading through lit on full age range for developmentally relevant info Concise understandable and authoritative easier to comprehend for immediate applicability in research      Critical Thinking about Critical Periods Donald B. Bailey, 2001 Arguing that in the first three years after birth infants undergo a period of brain reorganization that is the critical period in brain development during which children are most sensitive to environmental stimuli a team of editors from the fields of child development neurobiology and psychology  
Sensitive Periods in Development M. H. Bornstein, 2014-02-24 First published in 1987 Contemporary psychology is increasingly diversified pluralistic and specialized and most psychologists venture beyond the confines of their substantive specialty only rarely Yet psychologists with different specialties encounter similar problems ask similar questions and share similar concerns Unfortunately there are very few arenas available for the expression or exploration of what is common across psychological subdisciplines The Crosscurrents in Contemporary Psychology series is intended to serve as such a forum The chief aim of this series is to provide integrated perspectives on supradisciplinary themes in psychology Despite its contemporary diversity and high degree of specialization psychology embraces many phenomena that are of interest across subdisciplines largely because of the generality and ubiquity of those phenomena The sensitive period is one Sensitivity to different kinds of experience varies over the life cycle of an organism      *Issues Unresolved* Amatzia Weisel, 1998 The 20 provocative papers selected from the 18th International Congress on Education of the Deaf for this trenchant volume challenges the invested reader in four critical areas of deaf education worldwide      **Encyclopedia of Infant and Early Childhood Development**, 2020-03-13 Encyclopedia of Infant and Early Childhood Development Second Edition provides a comprehensive entry point into the existing literature on child development in the fields of psychology genetics neuroscience

and sociology Featuring 171 chapters across 3 volumes this work helps readers understand these developmental changes when they occur why they occur how they occur and the factors that influence development Although some medical information is included the emphasis lies mainly in normal growth primarily from a psychological perspective Comprehensive and in depth scholarly articles cover theoretical applied and basic science topics providing an interdisciplinary approach All articles have been completely updated making this resource ideal for a wide range of readers including advanced undergraduate and graduate students researchers and clinicians in developmental psychology medicine nursing social science and early childhood education Cutting edge content that cover the period of neonates to age three Organized alphabetically by topic for ease of reference Provides in depth scholarly articles covering theoretical applied and basic science Includes suggested readings at the end of each article
