shows that these subjects cannot construct a normal abstract grammar but instead have to rely on compensatory strategies such as memory and explicit rule use to produce language Psychoneurological tests show that though some of the subjects have other problems ranging from axial balance to mild cognitive impairments these other problems affect only a small proportion of them and therefore cannot be the cause of the language disorder There is good evidence from epidemiological and DNA studies that this language disorder is related to a genetic variant that runs in families Some aspects of the ability to build grammar therefore seem to be innate This publication is of special interest to students and researchers in communication sciences and disorders language pathology and neurolinguistics *Asha American*

Choi,2005

Pediatric Dysphagia Julina Ongkasuwan, Eric H. Chiou, 2018-10-18 Pediatric dysphagia is a clinical problem that crosses disciplines. Children may be seen by numerous medical specialties including pediatric otolaryngology, gastroenterology, pulmonology, speech pathology, occupational therapy, and lactation consultants. The myriad approaches to the diagnosis and management of dysphagia is confusing for both clinicians and families, resulting in recurrent trips to medical professionals. Feeding is integral to socialization and to bonding between infants and parents. Disruptions in feeding development can be extremely taxing emotionally and economically for families. Children with dysphagia are some of the most challenging patients even for clinicians who specialize in their care. This text provides the reader with a comprehensive understanding of swallowing and presents a practical evidence-based approach to the diagnosis and management of swallowing difficulties in children. It also highlights particular clinical challenges and controversies in the management of pediatric dysphagia. It is unique in that it incorporates the perspectives of multiple types of clinicians that care for these patients, including otolaryngologists, gastroenterologists, pulmonologists, speech pathologists, occupational therapists, and lactation consultants. In doing so, this text will encourage cross-specialty pollination of ideas and knowledge as well as stimulate further research in the field. Part 1 of the text begins with an overview of the anatomy and physiology of swallowing, with a focus on normal development as we currently understand it. It also discusses new information regarding reflexive interactions between the larynx and esophagus that potentially influence swallowing. It then moves on to a discussion of the advantages and limitations of currently available diagnostic modalities and highlights current controversies regarding frame rate radiation exposure, breastfeeding infants, and grading of studies. Additionally, it reviews the current literature regarding medical and behavioral-based therapy options, including thickening options, oromotor therapy, and controversies concerning strict NPO. Part 2 addresses specific diagnoses which can cause or be associated with dysphagia, such as prematurity, velopharyngeal insufficiency, ankyloglossia, laryngeal clefts, laryngomalacia, vocal fold paralysis, and cricopharyngeal dysfunction. The text goes on to explore the pathophysiology and treatment options for each. Anatomic, inflammatory, and neuromuscular esophageal causes of dysphagia are also evaluated. In addition, it delves into the impact of craniofacial anomalies, sialorrhea, and psychological factors on swallowing. Finally, it discusses how a multidisciplinary aerodigestive team can help streamline multidisciplinary care for individual patients. It will incorporate information pertinent to the different roles, tools, and views of a multidisciplinary dysphagia team, including how pediatric otolaryngologists, gastroenterologists, pulmonologists, speech language pathologists, occupational therapists, and dietitians can collaborate to provide optimal evaluation and care of these often challenging patients, especially for those who are at high risk of complications related to aspiration.
