Dimensional Adjectives Manfred Bierwisch, 1989-08-10 The present volume is the result of a project which concentrated on a selected subset of linguistic knowledge with the aim of giving a systematic account of the various aspects of structure and process in this subset and the interpretation of these The subset that for a number of reasons appeared appropriate to this undertaking centres around the dimensional adjectives of German That the enterprise ultimately produced a less integrated and complete result than expected is due to several reasons Some of these are of an intrinsic nature ever present and not particularly surprising Some however are related to the character of the project itself and are worth commenting upon as they reflect specific experiences and difficulties which we encountered during several years of working on the project We started from the assumption that the dimensional adjectives constitute a sufficiently rich but nevertheless limited domain of grammatical and conceptual structure which is fairly well understood and explored in relevant aspects Consequently we expected that summarizing integrating and extending the numerous results that were available should quickly lead to a more complete picture of the interaction of the components involved However even had the premise of this assumption been correct the conclusion turned out to be wrong fairly early in the project On closer inspection the investigations of the phenomena were much less complete the facts agreed upon less systematic and the proposed analyses far less convincing than supposed initially

intelligence researchers and philosophers this volume presents a richly varied picture of the nature and function of mental states Starting from questions about the cognitive capacities of the early hominin *Homo floresiensis* the essays proceed to the role mental representations play in guiding the behaviour of simple organisms and robots thence to the question of which features of its environment the human brain represents and the extent to which complex cognitive skills such as language acquisition and comprehension are impaired when the brain lacks certain important neural structures Other papers explore topics ranging from nativism to the presumed constancy of categorization across signed and spoken languages from the formal representation of metaphor actions and vague language to philosophical questions about conceptual schemes and colours Anyone interested in mental states will find much to reward them in this fine volume Studies in Language ,1990
