Dimensional Reduction of Gauge Theories, Spontaneous Compactification and Model Building Yura A. Kubyshin, Jose M. Mourao, Gerd Rudolph, Igor P. Volobujev, 2014-08-23 This monograph presents in detail the reduction method for studying the unification of fundamental actions The mathematical differential geometrical methods make extensive use of Lie Groups and the concept of homogeneous spaces The main topic of the book is the dimensional reduction of pure Yang Mills theories A rather complete analysis of the structure of the scalar field potential is given and a general procedure for solving the equations of spontaneous compactification within Einstein Yang Mills systems is presented The authors also discuss gravity and theories with fermions included and they review attempts to construct realistic models The book presents the basic ideas and the calculations in detail and should be of interest to researchers and graduate students in mathematical physics

Differential Geometry and Mathematical Physics Gerd Rudolph, Matthias Schmidt, 2017-03-22 The book is devoted to the study of the geometrical and topological structure of gauge theories It consists of the following three building blocks Geometry and topology of fibre bundles Clifford algebras spin structures and Dirac operators Gauge theory Written in the style of a mathematical textbook it combines a comprehensive presentation of the mathematical foundations with a discussion of a variety of advanced topics in gauge theory The first building block includes a number of specific topics like invariant connections universal connections H structures and the Postnikov approximation of classifying spaces Given the great importance of Dirac operators in gauge theory a complete proof of the Atiyah Singer Index Theorem is presented The gauge theory part contains the study of Yang Mills equations including the theory of instantons and the classical stability analysis the discussion of various models with matter fields including magnetic monopoles the Seiberg Witten model and dimensional reduction and the investigation of the structure of the gauge orbit space The final chapter is devoted to elements of quantum gauge theory including the discussion of the Gribov problem anomalies and the implementation of the non generic gauge orbit strata in the framework of Hamiltonian lattice gauge theory The book is addressed both to physicists and mathematicians It is intended to be accessible to students starting from a graduate level

students in mathematical physics **Relativity and the Dimensionality of the World** Vesselin Petkov, 2007-10-08 All physicists would agree that one of the most fundamental problems of the 21st century physics is the dimensionality of the world In the four dimensional world of Minkowski or Minkowski spacetime the most challenging problem is the nature of the temporal dimension In Minkowski spacetime it is merely one of the four dimensions which means that it is entirely given like the other three spacial dimensions If the temporal dimension were not given in its entirety and only one constantly changing moment of it existed Minkowski spacetime would be reduced to the ordinary three dimensional space But if the physical world represented by Minkowski spacetime is indeed four dimensional with time being the fourth dimension then such a world is drastically different from its image based on our perceptions Minkowski four dimensional world is a block Universe a frozen world in which nothing happens since all moments of time are given at once which means that physical bodies are four dimensional worldtubes containing the whole histories in time of the three dimensional bodies of our everyday experience The implications of a real Minkowski world for physics itself and especially for our world view are enormous The main focus of this volume is the question is spacetime nothing more than a mathematical space which describes the evolution in time of the ordinary three dimensional world or is it a mathematical model of a real four dimensional world with time entirely given as the fourth dimension It contains fourteen invited papers which either directly address the main question of the nature of spacetime or explore issues related to it 100 Years Of Gravity And Accelerated Frames: The Deepest Insights Of Einstein And Yang-mills Jong-ping Hsu, Dana S Fine, 2005-08-26 This collection of papers presents ideas and problems arising over the past 100 years regarding classical and quantum gravity gauge theories of gravity and spacetime transformations of accelerated frames Both Einstein's theory of gravity and the Yang Mills theory are gauge invariant The invariance principles in physics have transcended both kinetic and dynamic properties and are at the very heart of our understanding of the physical world In this spirit this book attempts to survey the development of various formulations for gravitational and Yang Mills fields and spacetime transformations of accelerated frames and to reveal their associated problems and limitations The aim is to present some of the leading ideas and problems discussed by physicists and mathematicians We highlight three aspects formulations of gravity as a Yang Mills field first discussed by Utiyama problems of gravitational theory discussed by Feynman Dyson and others spacetime properties and the physics of fields and particles in accelerated frames of reference These unfulfilled aspects of Einstein and Yang Mills profound thoughts present a great challenge to physicists and mathematicians in the 21st century *Renormalization Group '91 - Proceedings Of The 2nd International Conference* Dmitri V Shirkov, Viacheslav B Priezzhev, 1992-04-30 The papers included here deal with the many faces of renormalization group formalism as it is used in different branches of theoretical physics The subjects covered emphasize various applications to the theory of turbulence chaos quantum chaos in dynamical systems spin systems and vector models Also discussed are applications to related topics such as quantum field theory and chromodynamics high temperature superconductivity and
