Dimensions Of Personality:

Dimensions of Personality Hans J. Eysenck, This is the original work on which Hans Eysenck's fifty years of research have been built. It introduced many new ideas about the nature and measurement of personality into the field related personality to abnormal psychology and demonstrated the possibility of testing personality theory experimentally. The book is the result of a concentrated and cooperative effort to discover the main dimensions of personality and to define them operationally that is by means of strictly experimental quantitative procedures. More than three dozen separate researches were carried out on some 10 000 normal and neurotic subjects by a research team of psychologists and psychiatrists. A special feature of this work is the close collaboration between psychologists and psychiatrists. Eysenck believes that the exploration of personality would have reached an advanced state much earlier had such a collaboration been the rule rather than the exception in studies of this kind. Both disciplines benefit by working together on the many problems they have in common. In his new introduction Eysenck discusses the difficulty he had in conveying this belief to scientists from opposite ends of the psychology spectrum when he first began work on this book. He goes on to explain the basis from which *Dimensions of Personality* developed. Central to any concept of personality he states must be hierarchies of traits organized into a dimensional system. The two major dimensions he posited neuroticism and extraversion were in disfavor with most scientists of personality at the time. Now they form part of practically all descriptions of personality. *Dimensions of Personality* is a landmark study and should be read by both students and professionals in the fields of psychiatry psychology and sociology.

Dimensions of Personality Hans Juergen Eysenck,1966 The General Factor of Personality Janek Musek,2017-05-04 The General Factor of Personality improves our understanding of the personality structure and the relations between major personality dimensions as well as major dimensions of the entire non cognitive sphere of psychological variables The results of the empirical testing and theoretical evaluations in this book contribute to the more comprehensive and precise theoretical framework of the General Factor of Personality GFP and that of the entire personality structure Additionally the book answers some unresolved questions concerning the nature of the GFP including whether it is based more on correlations in real behavior or on other less substantial factors between lower order dimensions of personality This book is crucially important not only for theoretical reasons but also for the tremendous practical and applied value of the assumed general dimension of personality As a common denominator of all the most important fields of personality beyond cognition Big Five well being coping emotionality motivation self concept self esteem control wisdom and others the GFP represents an extremely strong single predictor of the quality of life mental health and well being career academic success and the quality

of family and interpersonal relations Reviews the theoretical and methodological work on the General Factor of Personality GFP Presents major research results in the field of GFP and the dimensional structure of personality Provides a balanced and objective approach to the topic of GFP addressing criticisms and controversies Considers the practical and applied aspects of this research Draws conclusions on the bioevolutionary model of GFP to give a more thorough understanding of biological bases of human personality

Handbook of Research Methods in Cardiovascular Behavioral Medicine Neil Schneiderman, Stephen M. Weiss, Peter G. Kaufmann, 2013-11-21 Cardiovascular disease continues to be the number one cause of death in the United States. Behavioral medicine was developed and shaped into the one source of morbidity and mortality in our country following the definition of the disease. Despite a 35% reduction since 1964, cardiovascular disease remains the leading cause of death. Behavioral medicine is the interdisciplinary field concerned with the development and integration of behavioral and biomedical science knowledge and techniques. The United States has lost nearly 1 000 000 lives each year in the last century. The Framingham study among others has identified the application of this knowledge and these techniques to prevention, diagnosis, treatment, and rehabilitation. It has identified three major risk factors implicated in the development of CHD: smoking, elevated serum cholesterol, and high blood pressure. At this concept of biobehavioral collaboration, 1986 Given that these factors account for less than 50% of the variance associated with CHD, scientists and clinicians of many disciplines to consider how they might more effectively address the disease. Jenkins 1976 it has become obvious that additional diagnostic, treatment, and prevention strategies must be identified if further progress is to be made in disease prevention and simultaneously among others behavioral psychology control

Dimensions of Personality Carl John Fischer, Walter J. Lingham, 1969 The Developing Structure of Temperament and Personality From Infancy To Adulthood Charles F. Halverson, Jr., Gedolph A. Kohnstamm, Roy P. Martin, Charles F. Halverson, Gedolph A. Kohnstamm, 2014-05-12 This book is the first to bring together researchers in individual differences in personality and temperament to explore whether there is any unity possible between the two. Prior to the workshop which resulted in this volume, the existing literature seemed to document a growing consensus on the part of the adult personality researchers that five major personality dimensions, the Big Five, might be sufficient to account for most of the important variances in adult individual differences in personality. In contrast to this, the literature on child and infant individual differences seemed to offer a wide variety of opinions regarding the basic dimensions of difference in personality or temperament. The editors believed that they could encourage researchers from both the adult and child areas to consider the importance of a lifespan conceptualization of individual differences by discussing their research in terms of a continuity approach. Written by some of the most distinguished scholars from Great Britain, continental Western Europe, and Eastern Europe as well as the United States and Canada, the chapters present a cross-cultural view of both adult personality and

temperament in infancy and childhood By sharing their recent data techniques and theoretical speculations the chapter authors communicate the research enthusiasm engendered by the growing consensus of the adult Big Five as well as the exciting prospects of an integrative program of research from infancy to adulthood that will clarify and consolidate what is now a disparate set of methods theory and findings across the lifespan The editors suggest that this volume will have considerable heuristic value in stimulating researchers to conceptualize their work in developmental lifespan approaches that will lead to a consolidation of individual differences research at every age
