Direct Method In Soliton Theory:

The Direct Method in Soliton Theory Ryogo Hirota, 2004-07-22 The bilinear or Hirota's direct method was invented in the early 1970s as an elementary means of constructing soliton solutions that avoided the use of the heavy machinery of the inverse scattering transform and was successfully used to construct the multisoliton solutions of many new equations. In the 1980s the deeper significance of the tools used in this method, Hirota derivatives and the bilinear form, came to be understood as a key ingredient in Sato's theory and the connections with affine Lie algebras. The main part of this book concerns the more modern version of the method in which solutions are expressed in the form of determinants and pfaffians. While maintaining the original philosophy of using relatively simple mathematics, it has nevertheless been influenced by the deeper understanding that came out of the work of the Kyoto school. The book will be essential for all those working in soliton theory.

The Direct Method in Soliton Theory, 2004 The modern version of the bilinear or Hirota's direct method is described here using relatively simple mathematics. As the only account in book form of the modern form of the theory, it will be essential reading for all those working in soliton theory. **Nonlinear and Modern Mathematical Physics** Solomon Manukure, Wen-Xiu Ma, 2024-06-07 This book gathers peer-reviewed selected contributions from participants of the 6th International Workshop on Nonlinear and Modern Mathematical Physics NMMP 2022, hosted virtually from June 17-19, 2022. Works contained in this volume cover topics like nonlinear differential equations, integrable systems, Hamiltonian systems, inverse scattering transform, Painlevé's analysis, nonlinear wave phenomena and applications, numerical methods of nonlinear wave equations, quantum integrable systems, and more. In this book, researchers and graduate students in mathematics and related areas will find new methods and tools that only recently have been developed to solve nonlinear problems. The sixth edition of the NMMP workshop was organized by Florida A M University in Tallahassee, Florida, USA, with support from the University of South Florida, Florida State University, Embry Riddle Aeronautical University, Savannah State University, Prairie View A M University, and Beijing Jiaotong University. The aim was to bring together researchers from around the world to present their findings and foster collaboration for future research. **Perspectives of Nonlinear Dynamics: Volume 2** E. Atlee

Jackson, 1989 The dynamics of physical, chemical, biological, or fluid systems generally must be described by nonlinear models whose detailed mathematical solutions are not obtainable. To understand some aspects of such dynamics, various complementary methods and viewpoints are of crucial importance. The presentation and style is intended to stimulate the reader's imagination to apply these methods to a host of problems and situations. **Perspectives of Nonlinear Dynamics: Volume 1** E. Atlee Jackson, 1989 The dynamics of physical, chemical, biological, or fluid systems generally must be described by nonlinear models whose detailed mathematical solutions are not obtainable. To understand some aspects of such dynamics, various complementary methods and viewpoints are of crucial importance. In this book, the perspectives generated by analytical, topological, and computational methods and interplays between them are developed in a variety of contexts. This
