picture of the independent learning experience what occurs in the minds of learners as they negotiate learning tasks without or with less guidance and instruction Cognition distraction embodied experience emotion and metacognition are central to this learning Drawing on new empirical data this volume focuses on university aged learners These are the learners who have been through our formal educational systems Do they learn well in independent settings Have they been prepared for this Through an explication of this experience this volume makes a case for how we can better prepare them for the demands of current and future learning
