Critical Load:

Approaches for Estimating Critical Loads of Nitrogen and Sulfur Deposition for Forest Ecosystems on U.S. Federal Lands Linda H. Pardo, 2010 Projected emissions of sulfur and nitrogen are expected to have continuing negative impacts on forests in spite of reductions in sulfur emissions as a result of SO₂ control programs Sulfur and nitrogen emissions present serious long term threats to forest health and productivity in the United States This report is intended to explain the differences in approaches for calculating critical loads for forest ecosystems in Europe Canada and the United States it is directed to air quality regulators and Federal Land Managers FLMs in the United States and addresses concerns particular to U S Federal lands The paper describes the basic mass balance approach for calculating critical loads presents the various critical thresholds and explains the assumptions inherent in the calculation and data selection procedure The input necessary from FLMs in the process of estimating the critical load is described *Uncertainty of Critical Loads in the Baltic Countries* Maria Holmberg, 2000 Sammanfattning Critical Loads and Dynamic Risk Assessments Wim de Vries, Jean-Paul Hettelingh, Maximilian Posch, 2015-04-20 This book provides a unique overview of research methods over the past 25 years assessing critical loads and temporal effects of the deposition of air pollutants It includes critical load methods and applications addressing acidification eutrophication and heavy metal pollution of terrestrial and aquatic ecosystems Applications include examples for each air pollution threat both at local and regional scale including Europe Asia Canada and the US The book starts with background information on the effects of the deposition of sulphur nitrogen and heavy metals and geochemical and biological indicators for risk assessments The use of those indicators is then illustrated in the assessment of critical loads and their exceedances and in the temporal assessment of air pollution risks It also includes the most recent developments of assessing critical loads and current and future risks of soil and water chemistry and biodiversity under climate change with a special focus on nitrogen The book thus provides a complete overview of the knowledge that is currently used for the scientific support of policies in the field of air pollution control to protect ecosystem services *What is a Critical Load?* R.
