

Critical Thinking Skills Profile of High School Students in AP Chemistry Learning

Gilan Raslan

Abstract From classrooms to workplaces, educators and policy makers have emphasized the necessity of graduating students who are strong critical thinkers for nearly 50 years and more (Forawi 2016). Critical thinking skills are a vital pillar skill to tackle the challenges of the twenty-first century.

Critical thinking is defined as a set of fundamental skills that must be mastered before one may progress to more complicated thinking. Aiming to obtain more insight into the aspects of critical thinking, the present study particularly examines quantitatively the critical thinking skills level of grade 12 students in a scientific learning context. Over a 35-min test, based on Danczak DOT criteria, data was collected and analyzed. The study's findings revealed that the students' critical thinking abilities are in medium range. However, other implications regarding curriculum modifications, educational teaching strategies and teachers' readiness are needed to foster students' critical thinking skills.

As a result, its most significant
