Critical Cosmology:

Topological GeometroDynamics Matti Pitkanen, 2006-05 Topological GeometroDynamics is a modification of general relativity inspired by the conceptual problems related to the definitions of inertial and gravitational energy in general relativity Topological geometrodynamics can be also seen as a generalization of super string models Physical space times are seen as four dimensional surfaces in certain eight dimensional space The choice of this space is fixed by symmetries of the standard model so that geometrization of known classical fields and elementary particle quantum numbers results The notion of many sheeted space time allows re interpretation of the structures of perceived world in terms of macroscopic space time topology The generalization of the number concept based on fusion of real numbers and p adic number fields implies a further generalization of the space time concept allowing to identify space time correlates of cognition and intentionality Quantum measurement theory extended to a quantum theory of consciousness becomes an organic part of theory A highly non trivial prediction is the existence of a fractal hierarchy of copies of standard model physics with dark matter identified in terms of macroscopic quantum phases characterized by dynamical and quantized Planck constant The book is a comprehensive overview and analysis of topological geometrodynamics as a mathematical and physical theory

Quantization and Discretization at Large Scales Florentin Smarandache, Victor Christianto, P. Pintr , 2012-01-01 This book is a compilation of research papers discussing the quantization of planetary distances in our solar system and other extrasolar systems It explores the relationship between the distance of planets and their stars and various formulas that suggest there is a reason to accept the quantization of these distances The book also investigates the connection between cosmology and condensed matter systems theorizing that the quantization of orbits could be caused by superfluid helium quantization Additionally it introduces new research trends related to superluminal physics and instantaneous physics

Critical Cosmology Gérard Raulet, 2005-01-01 Globalization is more than an economic or geopolitical matter it is above all a new political culture Like the Kantian revolution in the 18th century our global moment urgently requires philosophical inquiry to determine if it represents a 20th century revolution in thinking Critical Cosmology takes up the task of establishing the much needed philosophical tools to think globalization by reading Kant s re foundation of cosmopolitanism as a political not moral text Raulet in committing himself to a close study of this late capitalist global moment gets us to a much needed cosmology of 21st century globalization The world s economic evolution has continually challenged some of our most basic modern concepts especially the recognition of the rights of nations This evolution has also created a need for recognizing the rights of citizens and others participating in the growth of the world s economies In neither the service of a prescriptive morality nor in the service of any one specific cultural political or intellectual ideology Gerard Raulet investigates the construction of a public space that can accommodate global citizenship Through a unique and massive genealogy of political

thinkers Raulet like no other contemporary critic begins the process of carving out the social cultural and political space that will come to accommodate the common activity of an emerging global culture A brilliant and unique investigation of our contemporary political moment this will affect political thinkers of every variety and especially those who are concerned with conflict and peace studies the development of nations and nation states and human rights on a national and international scale
