Bronwyn Bevan, Philip Bell, Reed Stevens, Aria Razfar, 2012-07-26 Learning in informal settings is attracting growing attention from policymakers and researchers yet there remains at the moment a dearth of literature on the topic

Thus this volume which examines how science and mathematics are experienced in everyday and out of school time OST settings makes an important contribution to the field of the learning sciences

Conducting research on OST learning requires us to broaden and deepen our conceptions of learning as well as to better identify the unique and common qualities of different learning settings We must also find better ways to analyze the interplay between OST and school based learning

In this volume scholars develop theoretical structures that are useful not only for understanding learning processes but also for helping to create and support new opportunities for learning whether they are in or out of school or bridging a range of settings

The chapters in this volume include studies of everyday and situated processes that facilitate science and mathematics learning They also feature new theoretical and empirical frameworks for studying learning pathways that span both in and out of school time and settings

Contributors also examine structured OST programs in which everyday and situated modes of learning are leveraged in support of more disciplined practices and conceptions of science and mathematics

Fortifying much of this work is a leading focus on educational equity a desire to foster more socially supportive and intellectually engaging science and mathematics learning opportunities for youth from historically non dominant communities

Full of compelling examples and revealing analysis this book is a vital addition to the literature on a subject with a fast rising profile *School Science and*
