

# Directory Enabled Networks (DEN)

- Refers to the industry initiative, sponsored by DMTF
  - Acts as a repository for information about users and computing resources, network devices, services and applications
  - Developed as an extension to Common Information Model (CIM)
    - DEN information model adds network devices & services to the CIM information model
- ⇒ An information model that defines management abstraction of
- profiles and policies
  - devices, protocols, and services

Turner,Evan H. Magill,David J. Marples,2004-05-21 This book provides the first overview of the service technologies available to telecoms operators working in a post convergence world Previous books have focused either on computer networks or on telecoms networks This is the first to bring the two together and provide a single reference source for information that is currently only to be found in disparate journals tool specifications and standards documents In order to provide such broad coverage of the topic in a structured and logical fashion the book is divided into 3 parts The first part looks at the underlying network support for services and aims to explain the technology that makes the user visible services possible This section covers multimedia networking both traditional legacy and future softswitch call processing intelligent networks the Internet and Wireless networks Part 2 deals with how these services may be analysed and managed Chapters cover topics such as commercial issues service management quality of service security standards and APIs Part 3 concludes the book by looking ahead at evolving technologies and more speculative possibilities discussing the kinds of services that may be possible in the future and the technologies that will support them Focuses is on how the technology supports the services rather than on technology for its own sake Contributors drawn from both academia and industry companies such as Marconi BT Telcordia Cisco Analysys to give both theoretical and real world perspectives Unique single reference source for a
