Algorithms and Computational Techniques Applied to Industry Jorge Luis García Alcaraz, Arturo Realyvásquez Vargas, 2022-06-21 This book presents algorithms and computational applications integrated in software that are being applied in the industry It shows how companies using these tools are more competitive and efficient in the use and resources management The book is organized in three sections depending on the supply chain stage procurement including contact with costumers and product design Production process including relationship with suppliers and among departments and Distribution including logistics and transportation

Social Self-Organization Dirk Helbing, 2012-05-05 What are the principles that keep our society together This question is even more difficult to answer than the long standing question what are the forces that keep our world together However the social challenges of humanity in the 21st century ranging from the financial crises to the impacts of globalization require us to make fast progress in our understanding of how society works and how our future can be managed in a resilient and sustainable way This book can present only a few very first steps towards this ambitious goal However based on simple models of social interactions one can already gain some surprising insights into the social macro level outcomes and dynamics that is implied by individual micro level interactions Depending on the nature of these interactions they may imply the spontaneous formation of social conventions or the birth of social cooperation but also their sudden breakdown This can

end in deadly crowd disasters or tragedies of the commons such as financial crises or environmental destruction Furthermore we demonstrate that classical modeling approaches such as representative agent models do not provide a sufficient understanding of the self organization in social systems resulting from individual interactions The consideration of randomness spatial or network interdependencies and nonlinear feedback effects turns out to be crucial to get fundamental insights into how social patterns and dynamics emerge Given the explanation of sometimes counter intuitive phenomena resulting from these features and their combination our evolutionary modeling approach appears to be powerful and insightful The chapters of this book range from a discussion of the modeling strategy for socio economic systems over experimental issues up the right way of doing agent based modeling We furthermore discuss applications ranging from pedestrian and crowd dynamics over opinion formation coordination and cooperation up to conflict and also address the response to information issues of systemic risks in society and economics and new approaches to manage complexity in socio economic systems Selected parts of this book had been previously published in peer reviewed journals

Atlas of Forecasts Katy Börner, 2021-08-31 Forecasting the future with advanced data models and visualizations To envision and create the futures we want society needs an appropriate understanding of the likely impact of alternative actions Data models and visualizations offer a way to understand and intelligently manage complex interlinked systems in science and technology education and policymaking Atlas of Forecasts from the creator of Atlas of Science and Atlas of Knowledge shows how we can use data to predict communicate and ultimately attain desirable futures Using advanced data visualizations to introduce different types of computational models Atlas of Forecasts demonstrates how models can inform effective decision making in education science technology and policymaking The models and maps presented aim to help anyone understand key processes and outcomes of complex systems dynamics including which human skills are needed in an artificial intelligence empowered economy what progress in science and technology is likely to be made and how policymakers can future proof regions or nations This Atlas offers a driver s seat perspective for a test drive of the future

Building a Better Delivery System Institute of Medicine, National Academy of Engineering, 2005-10-20 In a joint effort between the National Academy of Engineering and the Institute of Medicine this books attempts to bridge the knowledge awareness divide separating health care professionals from their potential partners in systems engineering and related disciplines The goal of this partnership is to transform the U S health care sector from an underperforming conglomerate of independent entities individual practitioners small group practices clinics hospitals pharmacies community health centers et al into a high performance system in which every participating unit recognizes its dependence and influence on every other unit By providing both a framework and action plan for a systems approach to health care delivery based on a partnership between engineers and health care professionals Building a Better Delivery System describes opportunities and challenges to harness the power of systems engineering tools information technologies and complementary knowledge in social sciences cognitive

sciences and business management to advance the U S health care system Strategy & Business ,2001 *Modelling Complex Projects* Terry Williams,2002-10-11 IN RECENT YEARS the need for help in understanding project behaviour has been exacerbated as projects have become more complex while time scales have tightened adding to project complexity Project teams however rarely pay sufficient attention to modelling the behaviour of projects and this can lead to inadequate risk analysis ineffective project control and uninformed lessons learned Because the behaviour of complex projects is often puzzling or counter intuitive we need models This book presents a structured toolkit of techniques developed gradually from the simple to the more complex and provides examples to show where when and why the techniques should be used It looks at what causes project complexity describes various aspects of project behaviour and develops modelling tools Starting with more traditional techniques modelling individual effects on projects giving a full treatment including some novel network concepts the book enables readers to build breakdown and network type models It also considers some of the more difficult aspects of modelling by moving into the softer more subjective effects and then looking at systemic models of the effects as they come together Finally it looks at various methods of developing hybrid tools to utilise the benefits of combinations of techniques Based on a wealth of practical experience and bringing together a range of tried and tested techniques this book explains where the use of modelling can help estimate monitor control and analyse projects and thus lead to successful implementation Project Management David I.
