Information processing

Data is the primary input to an information processing system. Information processing systems produce meaningful information that is relied upon for decision making. The quality of the information produced will depend on the quality of the source data. We must ensure that our data comes from a reliable source and we must use validation and verification checks to ensure that it is input correctly. In this chapter, we will explore data, data sources, data processing, data storage and methods of evaluating information obtained from a variety sources, including online sources. On completion of this chapter, you should have developed an understanding of basic information processing principles.

By the end of this chapter
you should be able to:

- ✓ Distinguish between data and information.
- ✓ Evaluate the reliability of information obtained from online sources.
- ✓ Differentiate between validation and verification of data.
- ✓ Identify appropriate validation and verification checks given a particular scenario.
- ✓ Select appropriate forms of file organisation for particular applications.

Business Information Processing Syst 3ed
