advantage of improvement opportunities e.g. reducing costs, execution times or error rates. Importantly, BPM is not about improving the way individual activities are performed but rather about managing entire chains of events, activities and decisions that ultimately produce added value for an organization and its customers. This textbook encompasses the entire BPM lifecycle from process identification to process monitoring, covering along the way process modelling, analysis, redesign and automation. Concepts, methods and tools from business management, computer science and industrial engineering are blended into one comprehensive and interdisciplinary approach. The presentation is illustrated using the BPMN industry standard defined by the Object Management Group and widely endorsed by practitioners and vendors worldwide. In addition to explaining the relevant conceptual background, the book provides dozens of examples, more than 100 hands-on exercises, many with solutions as well as numerous suggestions for further reading. The textbook is the result of many years of combined teaching experience of the authors both at the undergraduate and graduate levels as well as in the context of professional training. Students and professionals from both business management and computer science will benefit from the step-by-step style of the textbook and its focus on fundamental concepts and proven methods. Lecturers will appreciate the class-tested format and the additional teaching material available on the accompanying website fundamentals.of.bpm.org.

Business Process Management Mathias Weske, 2024-07-13. In this book, Mathias Weske details the complete business process lifecycle from process modeling to process enactment and process evaluation. After starting with the general foundations and abstractions in business process management, he introduces process modeling languages and process choreographies as well as formal properties of processes and data. Eventually, he presents both traditional and advanced business process management architectures, covering for example workflow management systems, service-oriented architectures and data-driven approaches. The 4th edition of his book contains significant updates, including a new section on directly following graphs that play a crucial role in process mining. In addition, the core of declarative process modeling is introduced. The increasingly important role of data in business processes is addressed by a new section on data objects and data models in the data and decision chapter. To cover a recent trend in process automation, the enterprise systems architecture chapter now includes a section on robotic process automation. Mathias Weske argues that all communities involved need to have a common understanding of the different aspects of business process management. Hence, his textbook is ideally suited for classes on business process management, information systems architecture and workflow management alike. The accompanying website www.bpm-book.com contains further information and additional teaching material.
