index **Corporate DNA** Arnold Kransdorff, 2017-05-15 For more than half a century the developed world has been chasing productivity. It's financed our wealth but that part of output on which our continued prosperity depends—productivity growth—is petering out. The traditional scapegoat has been the dearth of worker skills. But the worker skills base has never been higher. The other explanation is that it is managers who are not giving full value to their employers. The way they're making decisions is conferring virtually no upside potential, which means they're leaving us wide open for experience-poor competitors to step into our experience-rich shoes. Exactly as Japan did in the 1960s and the so-called BRICK countries: Brazil, Russia, India, China. Especially China and Korea are threatening now. If creeping uncompetitiveness is not to overtake us from where are the next round of productivity gains to come from? Identifying some gaping holes in the way managers are taught to manage, this book outlines both the size of the problem and a solution. Businesses and other organizations, the author says, have to substantially raise the quality of their decision making. For this to happen they need to be much better experiential learners. And for experiential learning to take place, companies and other institutions have to better manage their corporate DNA: the institution-specific experiences otherwise known as Organizational Memory (OM), which characterizes any organization's ability to perform. It is the single biggest influence on decision-making excellence. It is a factor of production that has already been paid for at great expense yet is readily discarded in the backwash of the biggest change in workplace practice for more than a century: the actively encouraged flexible labour market. Corporate DNA explains why this key component of intellectual capital should be better managed, can be better managed, and particularly how it can be used to help organizations reduce the pandemic of repeated mistakes. **Bookseller and the Stationery Trades' Journal**, 1912

Daddy was a German Spy Brian Edwards, 2008-09-29 This engaging memoir covers the first 25 years of Brian Edwards' life in Northern Ireland during the 1940s and 1950s. His father abandoned his wife and son in dramatic circumstances when Brian was still a baby. He grew up in lodgings often cared for by landladies who were mad, bad, or simply sad while his mother was at work. In his early teens, Brian desperately tried to track down his mysterious father but to no avail. Years later, he discovered that he had at least one half-sister and that his father may well have been a German spy, a bigamist, and a charming con man who embezzled funds from numerous employers. While Brian's relationship with his parents and their extended families lies at the heart of this book, *Daddy was a German Spy* is also a funny, poignant, and intriguing story about growing up in Northern Ireland.

Plan S for Shock Robert-Jan Smits, Rachael Pells, 2022-01-27 Plan S for shock: the open access initiative that changed the face of global research. This is the story of open access publishing: why it matters now and for the future. In a world where information has never been so accessible and answers are available at the touch of a fingertip, we are hungrier for the facts than ever before. Something the Covid-19 crisis has brought to light. And yet paywalls put in place by multi-billion-dollar publishing houses are still preventing millions from accessing quality scientific knowledge, and public trust in science is under threat. On 4 September 2018, a bold new initiative known as Plan S was

unveiled kickstarting a world wide shift in attitudes towards open access research For the first time funding agencies across continents joined forces to impose new rules on the publication of research with the aim of one day making all research free and available to all What followed was a debate of global proportions as stakeholders asked Who has the right to access publicly funded research Will it ever be possible to enforce change on a multi billion dollar market dominated by five major players Here the scheme s founder Robert Jan Smits makes a compelling case for Open Access and reveals for the first time how he set about turning his controversial plan into reality as well as some of the challenges faced along the way In telling his story Smits argues that the Covid 19 crisis has exposed the traditional academic publishing system as unsustainable
