Buying A Computer:

Buying a Computer For Dummies Dan Gookin, 2005-10-27 Bestselling author Dan Gookin has updated his classic guide to cover CD burner DVD combo drives processor upgrades flat panel displays new modem and networking options new peripherals laptops and more Worldwide shipments of new computers now top 100 million units annually and forecasters have predicted double digit increases in PC shipments for 2003 2004 Using the author's unique five step approach to smart computer shopping readers analyze their needs and match them to the perfect PC at the best price Gookin who wrote the first ever For Dummies book DOS For Dummies is renowned for his How To Save Money Buying a Computer The Hyperink Team, 2012-02-08 ABOUT THE BOOK Investing in a new computer is a big deal Unless you are one of the few who can afford to buy new computer equipment every year you will probably keep your next purchase for four or five years That means it has to last and only a planned and calculated investment will help you to achieve this Not all of us can invest in the best and most expensive computer that has been just released into the marketplace and luckily we don't need to Most people are unaware that by just being a little cautious you can save a lot on your computer investment and at the same time get the equipment that suits your needs and demands MEET THE AUTHOR The Hyperink Team works hard to bring you high quality engaging fun content If ever you have any questions about our products or suggestions for how we can make them better please don't hesitate to contact us Happy reading EXCERPT FROM THE BOOK Tip 1 Know your needs Everyone has different expectations for their computer and this is the reason why there is such a diverse variety of computers in the market Those who travel a lot find that laptops suit their needs Those who usually use their computers at home find that desktops are best especially since they are much cheaper than laptops What are your needs Before you begin researching computers you should have an idea about the features you would like to have in your computer For instance if you just use your computer for web browsing you can save hundreds of dollars by going in for a netbook rather than spending extra money on the large memory space of a computer that you are never going to use Just because a salesperson or website offers you the option of an extremely powerful computer does not mean that you need to buy it Similarly someone who only surfs does not need to buy an expensive graphics card for advanced video games There's no need to stretch your budget to buy the latest available offering what's new today will most likely be replaced with something else tomorrow Tip 2 Don't go in for a lot of added software Buying a computer with a lot of software will not be of any help to you chances are you won't use most of it All your new computer needs is a pre installed operating system as this will help you to save money on the cost of upgrading After you've made your purchase you can install any extra software on your own For instance buying a computer with Microsoft Office installed is definitely more expensive than buying the software separately Computer companies try to provide all kinds of software with their computers and pretend to offer you a deal which is certainly not true Shopping around for your own software extras such as antivirus a word processor a pop up blocker and spyware removal is definitely going to be more
