Effects of Compressibility and Large Angles of Yaw on Pressure Indicated by a Total-pressure Tube Milton D. Humphreys, 1945 Summary The effects of compressibility and angle of yaw on the pressure measured by a round nose and a flat nose total pressure tube have been investigated The tests were conducted in the Langley rectangular high speed tunnel at Mach numbers from 0.3 to 0.9 for angles of yaw from 0 to 180 The results indicated that no error was incurred in the measurement of total pressure by either tube for angles of yaw from 0 to 10 in the Mach number range investigated At constant Mach numbers the round nose tube had a linear variation of total pressure error with angle of yaw at angles ranging from 50 to 70 This characteristic is desirable in yaw heads of the Y type The flat nose tube had a nonlinear variation of total pressure error with angle of yaw in this range
