Busy Workers:

The Labour Gazette, 1916 **Bitching and Moaning** Monica Moore, 2010-05 A social commentary of current times written from a unique point of view laced with poetry Software Verification Roderick Bloem, Rayna Dimitrova, Chuchu Fan, Natasha Sharygina, 2022-02-21 This book constitutes the refereed proceedings of the 13th International Conference on Verified Software VSTTE 2021 and the 14th International Workshop on Numerical Software Verification NSV 2021 held online in July October 2021 Due to COVID 19 pandemic the conference was held virtually There were 10 papers presented in this volume were carefully reviewed and selected from 20 submissions The papers focuses on challenges of the verification of cyber physical systems with machine learning components and making large scale verified software a practical reality and much more **Progress in Artificial Intelligence** Pedro Barahona, Jose J. Alferes, 2003-07-31 The Portuguese Association for Artificial Intelligence APPIA has been regularly organising the Portuguese Conference on Artificial Intelligence EPIA This ninth conference follows previous ones held in Porto 1985 Lisboa 1986 Braga 1987 Lisboa 1989 Albufeira 1991 Porto 1993 Funchal 1995 and Coimbra 1997 Starting in 1989 the conferences have been held biennially alternating with an APPIA Advanced School on Artificial Intelligence and become truly international English has been adopted as the official language and the proceedings are published in Springer's LNAI series The conference has reconformed its high international standard this year largely due to its programme committee composed of distinguished researchers in a variety of specialities in Artificial Intelligence half of them from Portuguese universities This has attracted a significant international interest well expressed by the number of papers submitted 66 from 17 different countries 29 of which are by Portuguese researchers From the 66 papers submitted about one third of them 23 were selected for oral presentation and have been published in this volume The review process enabled the selection of high quality papers each paper being reviewed by two or three reviewers either from the programme committee or by their appointment We would like to thank all of the reviewers for their excellent and hard work *Model Checking Software* Dragan Bosnacki, Stefan Edelkamp, 2007-08-30 This book presents the proceedings of the 14th International SPIN workshop on Model Checking Software held in Berlin Germany Fourteen full papers are presented together with four tool presentation papers and the abstracts of two invited talks The papers are organized into topical sections covering directed model checking partial order reduction program analysis exploration advances modeling and case studies and tool demonstrations **Programming Constraint Services** Christian Schulte, 2003-08-01 Constraint Programming is an approach for modeling and solving combinatorial problems that has proven successful in many applications It builds on techniques developed in Artificial Intelligence Logic Programming and Operations Research Key techniques are constraint propagation and heuristic search Constraint Programming is based on an abstraction that decomposes a problem solver into a reusable constraint engine and a declarative program modeling the problem The constraint engine implements the required propagation and search algorithms It can be realized as a library for a general purpose programming language

g C as an extension of an existing language e g Prolog or as a system with its own dedicated language The present book is concerned with the architecture and implementation of constraint engines It presents a new concurrent architecture that is far superior to the sequential architecture underlying Prolog The new architecture is based on concurrent search with copying and recomputation rather than sequential search with trailing and backtracking One advantage of the concurrent approach is that it accommodates any search strategy Furthermore it considerably simplifies the implementation of constraint propagation algorithms since it eliminates the need to account for trailing and backtracking The book investigates an expressive generalization of the concurrent architecture that accommodates propagation preserving combinators known as deep guard combinators for negation disjunction implication and retraction of constraint propagators Such combinators are beyond the scope of Prolog's technology In the concurrent approach they can be obtained with a reflective encapsulation primitive
