*Butterflies in My Stomach* Ronald L. Taylor, 1975      *Butterflies in My Stomach* Ronald L. Taylor, 1975-06-01      **Insects as food and feed: From production to consumption** Arnold Van Huis, Jeffrey Tomberlin, 2017-09-15 Alternative protein sources are urgently required as the available land area is not sufficient to satisfy the growing demand for meat. Insects have a high potential of becoming a new sector in the food and feed industry mainly because of the many environmental benefits when compared to meat production. This will be outlined in the book as well as the whole process from rearing to marketing. The rearing involves large scale and small scale production facility design, the management of diseases and how to assure that the insects will be of high quality genetics. The nutrient content of insects will be discussed and how this is influenced by life stage, diet, the environment and processing. Technological processing requires decontamination, preservation and ensuring microbial safety. The prevention of health risks e.g. allergies will be discussed as well as labelling, certification and legislative frameworks. Additional issues are insect welfare, the creation of an enabling environment, how to deal with consumers, gastronomy and marketing strategies. Examples of production systems will be given both from the tropics: palm weevils, grasshoppers, crickets and from temperate zones: black soldier flies and house flies as feed and mealworms and crickets as food. Detailed photographs are shown at the beginning of each section and chapter.

**The Diet of John the Baptist** James A. Kelhoffer, 2005 James A. Kelhoffer offers a comprehensive analysis of Mark 1:6c par Matt 3:4c in its socio-historical context, the Synoptic gospels and subsequent Christian interpretation. The first chapter surveys various anecdotes about John's food in the Synoptic gospels and notes that there has never been a consensus in scholarship concerning John's locusts and wild honey. Chapters 2 and 3 address locusts as human food and assorted kinds of wild honey in antiquity. Chapter 4 considers the different meanings of this diet for the historical Baptist Mark and Matthew. Contemporary anthropological and nutritional data shed new light on John's experience as a locust gatherer and assess whether these foods could have actually sustained him in the wilderness. The last chapter demonstrates that the most prevalent interpretation of the Baptist's diet from the third through the sixteenth centuries hails John's simple wilderness provisions as a model for believers to emulate.

**Forest Entomology** Robert N. Coulson, John A. Witter, 1984-05-14 This text considers forest insects occurring in forest ecosystems, specialized forestry settings and urban forests with an approach and coverage that make it suitable for use in both undergraduate and graduate courses in forest entomology and forest protection. Early chapters introduce entomology, middle chapters provide the first comprehensive treatment of the principles of Integrated Pest Management (IPM) of forest insects and later chapters discuss the pest insects according to their feeding group.
