History of Ideology Ylia Callan, 2025-09-06 History of Ideology Beyond AI Capitalism is a bold and sweeping exploration of humanity's economic journey from the first hunter gatherer bands to the rise of agriculture to the ascent of capitalism and now to the dawn of artificial intelligence As AI and automation disrupt every industry the old equation of work for wages wages for survival is beginning to collapse This book argues that capitalism while revolutionary in its time has reached its limits on a finite planet Endless growth resource extraction and privatisation of the commons can no longer sustain human well being nor can they survive the technological shockwave that is eliminating the very jobs capitalism depends on Instead of painting a picture of doom History of Ideology offers a hopeful practical vision for what comes next It calls for a new compass beyond GDP one that measures human flourishing rather than raw production It explores tools such as Universal Basic Income sovereign wealth funds platform cooperatives and data trusts as the building blocks of a post capitalist economy And it imagines a future where purpose creativity environmental restoration and care work become the centre of human life This is a book about history technology and economics but ultimately it is a book about choice The future is not something that happens to us It is something we build

Current and Prospective Applications of Virtual Reality in Higher Education Choi, Dong Hwa, Dailey-Hebert, Amber, Estes, Judi Simmons, 2020-07-31 For the last decade virtual reality has been utilized in diverse fields such as entertainment medicine and industry Recently virtual reality has been applied in educational settings in order to transform student learning and experiences through such methods as building prototypes using digital devices or exploring new cultures through immersive interactions Teachers who can incorporate virtual reality into their classrooms can provide their students with more meaningful learning experiences and can witness higher engagement Current and Prospective Applications of Virtual Reality in Higher Education is a cutting edge academic research book that provides comprehensive research on the integration of virtual reality in education programs and establishes foundations for course design program development and institutional strategic planning The book covers an overall understanding and approach to virtual reality in

education specific applications of using virtual reality in higher education and prospects and issues of virtual reality in the future Highlighting a wide range of topics such as gamification teacher training and virtual reality this book is ideal for teachers instructional designers curriculum developers academicians program developers administrators educational software developers policymakers researchers education professionals and students Model-Based Enterprise Bryan R. Fischer,2024-12-17 Model Based Enterprise describes Model Based Enterprise MBE and Model Based Definition MBD in detail focusing on how to obtain significant business value from MBE This book presents MBE from technical and business perspectives focusing on process improvement productivity quality and obtaining greater value from our information and how we work The evolution of MBD and MBE from computer aided design CAD topics to current approaches and to their future roles is discussed Following the progression from manual drawings to 2D CAD 3D CAD and to digital data and digital information models MBE is presented as the method to achieve productivity and profitability by understanding the cost of how we work and refining our approaches to creating and using information Many MBD and MBE implementations have changed how we work but yield little real business value processes changed engineering drawings were replaced with 3D models but the organization achieved minor benefits from their efforts This book provides methods to become an MBE and achieve the full value possible from digital transformation Model Based Enterprise is essential reading for anyone who creates or uses product related information in original equipment manufacturers OEMs and suppliers in the private sector and in government procurement and development activities This book is also essential for students in all engineering disciplines manufacturing quality information management product lifecycle management PLM and related business disciplines **Applied Artificial Intelligence Reporter** ,1986 *ICS Applied Artificial Intelligence Reporter* ,1985 *A Very Human Future* Rohit Talwar,Steve Wells,Alexandra Whittington,Helena Calle ,2018-10-15 A Very Human Future is written from the premise that the pace of penetration and scale of disruption of new technologies requires us to adopt a new all encompassing protective logic for society moving forward Enriching Humanity in a Digitized World means placing humanity at the center of the agenda so that we avoid dehumanizing ourselves and future generations As society enters the fourth industrial revolution a major question arises can we harness intense technological bursts of possibility to bring about a better world A Very Human Future illustrates how the evolution of society cities people businesses industries nations and governments are being unexpectedly entangled by exponential technological disruption This is not a book about technology but an exploration of how we make it serve humanity s highest needs and ambitions Each chapter looks at how new ideas enabled by emerging technologies are straining the old social fabric and proposes radical future scenarios strategies and actions to safeguard humanity from harm and enhance opportunity for all This book is a manifesto for a future that is better than the past A Very Human Future rejects an outlook where human beings live a mundane existence while technologies burst with possibility Rather we use this book to endorse a proactive approach to the future where technology is designed to

benefit humanity purposefully and intentionally To advocate for A Very Human Future we ask for example how do we use technology to overcome gender bias or to impart a meaningful education to new generations Can artificial intelligence tools make government more trustworthy and help us deal with the impacts of automation replacing humans What rights should people have when residing in smart cities The scale of the new technologies requires a protective logic for moving forward keeping humanity at the centre so that we avoid dehumanizing ourselves and future generations A Very Human Future is not one but many positive stories and visions of the future can be powerful beacons for social adaptation We argue that the time to control the narrative of the future and stake a claim for humanity is now A Very Human Future uses knowledge as power describing surprising ways new thinking and disruptive technology can impact society This book explains that protecting what s human is the key to retaining our dominance over future technological progress

Surveillance Education Nolan Higdon,Allison Butler,2024-08-02 Surveillance Education explores the pervasive use of digital surveillance technologies in schools and assesses its pernicious effects on students Recognizing that the use of digital technologies will persist the authors instead offer practical ways to ameliorate their impact In our era of surveillance capitalism digital media technologies are ever more intertwined into the educational process Schools are presented with digital technologies as tools of convenience for gathering and grading student work as tools of support to foster a more equitable learning environment and as tools of safety for predicting or preventing violence or monitoring mental emotional and physical health Despite a dearth of evidence to confirm their effectiveness digital data collection and tracking is often presented as a way to improve educational outcomes and safety This book challenges these fallacious assumptions and argues that the use of digital media technologies has caused great harm to students by subjecting them to oppressive levels of surveillance impinging upon their right to privacy and harvesting their personal data on behalf of Big Tech In doing so the authors draw upon interviews from K 12 and higher education students teachers and staff civil rights and technology lawyers and educational technological programmers The authors also provide practical guidance for teachers administrators students and their families seeking to identify and combat surveillance in education This urgent eye opening book will be of interest to students and educators with interests in critical media literacy and pedagogy and the sociology of technology and education
