Affordable Ai Logo Maker For Dads:

The Coin Giver M. M. Buckner, 2014-04-01 In a future of AI and clones identity is at risk A cyberpunk thriller from the first clear cut new star of twenty first century SF Robert J Sawyer In the 23rd century the Earth's surface is devastated by global warming and corporations exploit billions of poverty stricken employees whose lifetime contracts they own Richter Jedes the rich powerful CEO of ZahlenBank wants to live forever so he makes two copies of himself One is an evolved Artificial Intelligence imprinted with his personality The other is a perfect clone named Dominic whom he raises as his son When Richter suddenly dies his son Dominic is left to deal with a terrible crisis which threatens ZahlenBank And though Dominic loathes the egotistical AI masquerading as his father they need each other's help to save the bank Which of them is the true copy and which is fake Do they have free will or are their destinies programmed in their source code And most important of all does individual identity still have any meaning This book was originally published under the title NeuroLink

Mathematical Intelligence Mubeen Junaid, 2022-11-01 A fresh exploration into the human nature versus technology argument revealing an unexpected advantage that humans have over our future robot masters we're actually good at mathematics There's so much discussion about the threat posed by intelligent machines that it sometimes seems as though we should simply surrender to our robot overlords now But Junaid Mubeen isn't ready to throw in the towel just yet As far as he is concerned we have the creative edge over computers because of a remarkable system of thought that humans have developed over the millennia It's familiar to us all but often badly taught in schools and misrepresented in popular discourse math Computers are of course brilliant at totting up sums pattern seeking and performing mindless tasks of well computation For all things calculation machines reign supreme But Junaid identifies seven areas of intelligence where humans can retain a crucial edge And in exploring these areas he opens up a fascinating world where we can develop our uniquely human mathematical talents Just a few of the fascinating subjects covered in MATHEMATICAL INTELLIGENCE include Humans are endowed with a natural sense of numbers that is based on approximation rather than precise calculation Our in-built estimation skills complement the precision of computers Interpreting the real world depends on both What sets humans apart from other animals is language and abstraction We have an extraordinary ability to create powerful representations of knowledge more diverse than the binary language of computers Mathematics confers the most robust logical framework for establishing permanent truths Reasoning shields us from the dubious claims of pure pattern recognition systems All mathematical truths are derived from a starting set of assumptions or axioms Unlike computers humans have the freedom to break free of convention and examine the logical consequences of our choices Mathematics rewards our imagination with fascinating and on occasion applicable concepts that originate from breaking the rules Computers can be tasked to solve a range of problems but which problems are worth the effort Questioning is as vital to our repertoire of thinking skills as problem solving itself
