AI Chatbots in Customer Service Evgeny Kagan, Maqbool Dada, Brett Hathaway, 2022 Despite recent advances in language processing algorithms chatbot technology continues to face adoption hurdles We survey chatbot users about their experiences and use their testimonies to construct a decision model of customer choice between the chatbot service channel and the live agent service channel The fundamentals of this choice are the time spent in line and in service the chatbot s success rate and the qualitative differences in the service experience provided by the chatbot and by the live agent We then conduct experiments in which participants choose and then experience the chatbot or the live agent channel as we vary operational i e times spent and chatbot success rates and qualitative features of the chatbot We find that users respond positively to improvements in chatbot operational performance however the chatbot channel remains underutilized relative to what expected time minimization would predict Additional experiments show that this underutilization is caused by two separate mechanisms algorithm aversion aversion to an algorithmic service provider and gatekeeper aversion aversion to any service format that may involve multiple stages Examining potential remedies we find that algorithm aversion can be mitigated by making salient the expected time savings offered by the chatbot However gatekeeper aversion is more persistent and harder to overcome We conclude by building and estimating a structural model of channel demand and by proposing a behavior aware service design that reduces the firm s staffing costs by up to 22% **AI-Augmented Customer Support Representative** HEBooks, Tired of getting buried under repetitive tickets endless FAQs and frustrated customers Welcome to the future of customer support where AI isn t replacing you it s empowering you In AI Augmented Customer Support Representative you ll discover how to harness artificial intelligence as your ultimate sidekick not your competitor From automating routine tasks to delivering hyper personalized experiences and preventing issues before they escalate this book gives you the tools techniques and confidence to work smarter not harder No coding skills No tech background Just real world strategies for real support pros who want to reduce burnout boost efficiency and future proof their careers in a world that s moving fast Whether you re on live chat email or managing a helpdesk this guide will show you how to become an AI savvy standout the kind of rep who doesn t just survive change but leads it Inside You ll Learn How AI is reshaping support and why it s good news for you Tools like Zendesk Intercom and Jasper explained simply Automate FAQs sort tickets and generate responses in seconds Train bots interpret analytics and collaborate with tech teams Stay ethical empathetic and
