Data storage processing and management at remote location over dynamic networks is the most challenging task in cloud networks. Users' expectations are very high for data accuracy, reliability, accessibility, and availability in pervasive cloud environment. It was the core motivation for the Cloud Networks Internet of Things (CNIoT). The exponential growth of the networks and data management in CNIoT must be implemented in fast growing service sectors such as logistic and enterprise management. The network based IoT works as a bridge to fill the gap between IT and cloud networks where data is easily accessible and available. This book provides a framework for the next generation of cloud networks which is the emerging part of 5G partnership projects. This contributed book has following salient features:

- A cloud based next generation networking technologies
- Cloud based IoT and mobility management technology

The proposed book is a reference for research scholars and course supplement for cloud IoT related subjects such as distributed networks in computer electrical engineering. Deciphering Antimicrobial Resistance:

Genetic Insights and Perspectives Massimiliano Lucidi, Valerio Baldelli, Mattia Pirolo, Daniela Visaggio, 2025-11-18

Antimicrobial agents form the essential shield behind which modern medicine operates. However, this shield is progressively weakening as antimicrobial resistance (AMR) escalates, posing a serious global health threat that affects humans and animals. The spread of AMR is fueled by multiple factors, including misuse and overuse of antimicrobials, inadequate diagnostic practices, and the plasticity of microbial genomes. With antimicrobials being essential in medical care, the rise of AMR jeopardizes our ability to combat common infections and increases the risks associated with routine medical procedures. To address this issue, it is vital to invest in research covering various aspects of AMR, including the genetic mechanisms underlying resistance and its evolution, and the surveillance of resistance and its spread in humans, animals, and the environment. *Frontiers in Cellular and Infection Microbiology* aims to offer a comprehensive collection of articles delving into the genetic factors influencing AMR. This collection covers a broad spectrum of subjects, including but not limited to: epidemiological monitoring of resistance prevalence in clinical, veterinary, and environmental settings; designing genetic strategies to address or preclude AMR; advancements in molecular diagnostic methodologies; the identification of mechanisms of action for novel antimicrobial compounds; and the exploration of novel mechanisms contributing to antimicrobial resistance. Manuscripts will be selected primarily based on the novelty of research findings and scientific quality. We invite contributors to submit articles in one of the following types: Hypothesis and Theory, Methods, Opinion, Review, Original Research, and Perspectives across the following primary areas: i) Analysis of AMR in the clinical, veterinary, and environmental settings; ii) Design of novel diagnostic tools to characterize AMR; iii) Identification and characterization of novel AMR mechanisms; iv) Investigation of the mechanisms of action for new antimicrobials; v) Generation of novel genetic platforms for the screening of new antimicrobial compounds; vi) Study of the regulatory networks controlling AMR.
