Deep Swarm and Evolution for Generative Artificial Intelligence Hitoshi Iba, 2025-07-29 This book provides theoretical and practical knowledge about swarm and evolutionary approach of generative AI and Large Language Models LLMs The development of such tools contributes to better optimizing methodologies with the integration of several machine learning and deep learning techniques In particular it discusses how the emergence concept can contribute to the improvement of AI The book aims to model human cognitive function in terms of emergence and to explain the feasibility of AI To this end it focuses on human perceptions of utility It describes the emergence of various cognitive errors and irrational behaviours in the multiobjective situations It also reviews the cognitive differences and similarities between humans and LLMs Such studies are important when applying LLMs to real world tasks that involve human cognition e.g financial engineering and market issues The book describes the intelligent behaviour of living organisms This is to clarify how to achieve AI in the direction of artificial life It describes sexual selection which is a well known natural phenomenon that troubled Darwin i.e why evolutionarily useless items evolved such as peacock feathers and moose antlers etc The book shows how sexual selection is extended as novelty search for the application of generative AI i.e the image generation with diffusion model Real world applications are emphasised Empirical examples from real world data show how the concept of deep swarm and evolution is successfully applied when addressing tasks from such recent fields as robotics e-commerce Web Shop and image generation etc
