AI dilemma, is art still real? When machines create, who owns the work? Roger Menzi, 2025-03-17

AI dilemma: Is art still real? When machines create, who owns the work? A non-fiction book by Roger Menzi. The boundaries between human creativity and machine production are becoming blurred. Artificial intelligence composes music, paints pictures, and writes texts, but is this really art? And if so, who owns the work? *AI Dilemma: Is art still real? When machines create, who owns the work?* The legal risks associated with the use of AI get to the bottom of precisely these questions. This book sheds light on the profound ethical, legal, and creative challenges posed by AI-generated art. It provides an in-depth overview of the risks and opportunities of AI in the music and art industry, from accusations of plagiarism and copyright to the economic impact for artists and creatives. Is a piece of music composed with AI really an original work? Can AI-generated works be used commercially or are there legal pitfalls? Could the music industry be revolutionized or even destroyed by AI creations? The book provides exciting background information, shows practical possible case studies, and looks at possible court rulings and future legal developments. It becomes clear that digitalization has changed the art world forever, and those who are not familiar with the new rules risk being left behind. With easy-to-understand explanations, practical examples, and a keen eye for the reality of the digital creative industry, this book will help anyone involved in AI art, whether musician, artist, producer, or anyone else who is simply curious. Discover what the future of art looks like and how you can help shape it. Whether you are creative yourself, use AI as a tool, or simply want to understand how art, music, and copyright are changing in the digital age, this book will give you exciting insights, tips, and solutions. This book is for anyone who uses AI as a tool or simply wants to understand how art, music, and copyright are changing in the digital age.

The Editors Stephen

Harrison,2024-08-13 With the pace of a thriller and the heart of a drama Taylor Lorenz *The Editors* is unnervingly familiar to anyone who has googled scrolled or browsed online in the past decade Aim for Neutrality We Need Better Sources Anonymity is Fundamental Keep Developing The editors know these principles The editors follow them every day usually The editors may not be recognized on the street but they craft the information that is seen on nearly every internet search Through Infopendium a global crowd sourced internet encyclopedia the editors influence the world Freelance journalist Morgan Wentworth recently laid off from PopFeed News attends the Global Infopendium Conference in New York expecting a straightforward story to help pay the rent But the so called pendium people are full of surprises PhDs rub shoulders with high school students all quoting the project s rules and regulations like a second language Sure millions of people see the facts curated by these editors but who really cares about the free encyclopedia When a hacker attacks the conference and posts a cryptic message it becomes clear that somebody does And Morgan decides to find out who But the path through an online information war is far from clear Foreign governments billionaires and a global virus threaten to sway the truth on Infopendium And far from Morgan s sight in places as different as Beijing and Kansas some of the editors have plans of their own

Successful Process Mining Projects Roland Woldt,2025-09-15 Driving blind and too fast or not fast enough Most organizations have a hard time seeing where their performance lacks They see the metrics from the past but don t have visibility into how these numbers were produced What went well and what did not go so well and why So they have no idea how to improve their processes Do organizations measure the performance of their processes Well often I see only some lagging metrics being measured There are almost no predictive measures being defined and processes are not adapted to changing situations for example when it comes to delays of a supplier shipment There are just a few organizations that actually have their processes formally designed in the form of process models And those who do might see them only as an exercise to appease the gods their management or the regulators This creates interesting results when it comes to audits some poor souls figuring out what actually happens which might lead to regulatory notes that you have not made enough progress or even to hefty fines Overall I am missing an awareness of the need to measure what you are doing Some smart person once said You can only measure what you see and how boring would a football match be if we had not defined what winning means and how you can create the necessary points on the scoreboard Process Intelligence a new frontier for Process Management Over the last couple of years I have seen more interest in addressing these issues Process mining is the speedometer for your business It gives you visibility into how your processes are executed Not only the happy path that you might or might not have documented but all variations that you get from your runtime systems Process mining gives you calculated performance metrics out of the box like frequencies and times and shows you where you have rework or other unwanted behaviors Dashboards show metrics that allow you to investigate your performance hypotheses Data from mining can be embedded in existing BI dashboards You can trigger actions from thresholds and interact with running process

instances think notifications alerts or transactions Process mining is embedded in a larger BPM practice You can download discovered processes to use for future state design or simulation Or you upload reference processes and the tool checks to what degree you have conformed to how the work should be done Mining technologies close the missing gap in the process lifecycle and provide a data driven analysis approach for performance management Who is this book for This book is for people who are serious about how they can improve how their organizations run and how they can make their next large transformation project a success It is for the process and architecture practitioners who run their programs for years and don t get the visibility that they deserve It is for the analysts who want to switch their practices to a data driven approach while not forgetting the human contributions in the analysis and for whom the words Digital Gemba sound good And it is for the curious folks who have heard about process intelligence and were wondering what this means and how this fits into their organizations without creating another hype and disappointment when the results of the first project do not meet expectations As you know the first time you do something you most likely suck and that is the same here But wait this is not all This book also comes with an accompanying website which includes additional tools all graphics as PDF and a checklist for your mining projects It also comes with the necessary source files data workflows reference models in BPMN format an ARIS database and an ARIS Process Mining project
