Born-Digital Texts in the English Language Classroom Saskia Kersten, Christian Ludwig, 2024-06-11 This book is the first to focus specifically on born digital texts in EFL teaching uniting international and innovative scholarship with practical classroom applications The book develops a

theoretically sound framework for curriculum materials and methods design that takes into account the growing ubiquity of born digital texts in the digital age. It covers a broad variety of born digital text types including those generated by AI which so far have not been an explicit focus in the context of language teaching while also providing a grounding in current discussions around digital tools in education. The chapters cover a wide range of issues from methodological approaches to born digital texts to curriculum syllabus and materials design. The book will be a valuable introduction to the subject for trainee and practising teachers as well as teacher educators and students on EFL courses. Chapter 7 is free to download as an open access publication under a CC BY licence and is available here <https://zenodo.org/records/11174197>. *Integrating Generative AI in Education to Achieve Sustainable Development Goals* Doshi, Ruchi, Dadhich, Manish, Poddar, Sandeep, Hiran, Kamal Kant, 2024-06-03. A new challenge has become present in the field of generative artificial intelligence (AI). The fundamental nature of education, a vital element for advancing the United Nations Sustainable Development Goals (SDGs), now grapples with the transformative impact of AI technologies. As we stand at this intersection of progress and pedagogy, critical questions surface about the future roles of educators and the integrity of assessment processes. AI's rapid progression prompts an exploration of the competencies our education systems must cultivate in a world where human and machine intelligence are becoming increasingly interconnected. Against this backdrop of transformative uncertainty, *Integrating Generative AI in Education to Achieve Sustainable Development Goals* addresses profound challenges and offers promising solutions at the crossroads of AI and education. This book assembles distinguished academics, researchers, and practitioners forming a collective voice on the intersection of Generative AI and education. The three-part structure dissects the technical aspects of AI-powered innovations in educational design, explores multidisciplinary applications enhancing educational content, and highlights AI-driven solutions to address equality and inclusion concerns within educational systems. The book also underscores the importance of ethical considerations of generative AI to ensure a future where technology serves the broader goals of sustainability and equitable education.

Cases on Enhancing P-16 Student Engagement With Digital Technologies Gierhart, Aaron R., 2024-12-27. Reimagining how digital technologies are integrated into education is crucial for fostering active and meaningful student engagement. Traditional knowledge-centric approaches often overlook the dynamic processes students use to interact with and apply technology in their learning. By focusing on how students actively engage with digital tools to meet academic and developmental goals, educators can create richer, more effective learning experiences. This shift not only enhances academic outcomes but also prepares students with the critical skills needed to navigate and contribute to an increasingly digital world. *Cases on Enhancing P-16 Student Engagement With Digital Technologies* features cases of teaching and learning with digital technologies in P-16 educational settings, focusing specifically on what learners do with technology. It shares cases of teaching in which technologies are leveraged in student-centered ways that transform learning and allow students to engage in authentic, meaningful learning experiences. Covering
