AI for Small Business Owners Callisto Momesso, 2025-05-22 Finally AI Made Simple for Your Small Business And No You Don't Need to Be a Tech Whiz Are you a small business owner wearing all the hats feeling like there are never enough hours in the day Do you hear about Artificial Intelligence and think it's just for giant corporations with massive budgets and teams of engineers If so you're not alone and this book is written especially for you My name is Callisto Momesso and as an AI enthusiast who has seen countless talented entrepreneurs get bogged down by the daily grind I'm passionate about leveling the playing field AI for Small Business Owners Automate Innovate it's the accessible reality AI offers and this guide will show you how Inside you'll discover Simple Explanations AI concepts broken down so they actually make sense Real World Tools A curated list of affordable often free to start AI solutions for marketing customer service operations and content creation Actionable Strategies Step by step guidance on how to automate repetitive tasks that drain your energy and budget Inspiring Case Studies See how other small businesses just like yours are achieving remarkable results with AI Quick Start Templates you just need a little guidance and the right tools Let this booklet be your companion on an exciting journey to automate innovate and grow You can do this and the future of your business looks brighter with AI by your side Successful Process Mining Projects Roland Woldt, 2025-09-15 Driving blind and too fast or not fast enough Most organizations have a hard time seeing where their performance lacks They see the metrics from the past but don't have visibility into how these numbers were produced What went well and what did not go so well and why So they have no idea how to improve their processes Do organizations measure the performance of their processes Well often I see only some lagging metrics being measured There are almost no predictive measures being defined and processes are not adapted to changing situations for example when it comes to delays of a supplier shipment There are just a few organizations that actually have their processes formally designed in the form of process models And those who do might see them only as an exercise to appease the gods their management or the regulators This creates interesting results when it comes to audits some poor souls figuring out what actually happens which might lead to regulatory notes that you have not made enough progress or even to hefty fines Overall I am missing an awareness of the need to measure what you are doing Some smart person once said You can only measure what you see and how boring would a football match be if we had not defined what winning means and how you can create the necessary points on the scoreboard Process Intelligence a new frontier for Process Management Over the last couple of years I have seen more interest in addressing these issues Process mining is the speedometer for your business It gives you visibility into how your processes are executed Not only the happy path that you might or might not have documented but all variations that you get from your runtime systems Process mining gives you calculated performance metrics out of the box like frequencies and times and shows you where you have rework or other unwanted behaviors Dashboards show metrics that allow you to investigate your performance hypotheses Data from mining can be embedded in existing BI dashboards You

can trigger actions from thresholds and interact with running process instances think notifications alerts or transactions Process mining is embedded in a larger BPM practice You can download discovered processes to use for future state design or simulation Or you upload reference processes and the tool checks to what degree you have conformed to how the work should be done Mining technologies close the missing gap in the process lifecycle and provide a data driven analysis approach for performance management Who is this book for This book is for people who are serious about how they can improve how their organizations run and how they can make their next large transformation project a success It is for the process and architecture practitioners who run their programs for years and don't get the visibility that they deserve It is for the analysts who want to switch their practices to a data driven approach while not forgetting the human contributions in the analysis and for whom the words Digital Gemba sound good And it is for the curious folks who have heard about process intelligence and were wondering what this means and how this fits into their organizations without creating another hype and disappointment when the results of the first project do not meet expectations As you know the first time you do something you most likely suck and that is the same here But wait this is not all This book also comes with an accompanying website which includes additional tools all graphics as PDF and a checklist for your mining projects It also comes with the necessary source files data workflows reference models in BPMN format an ARIS database and an ARIS Process Mining project
