AI Agents vs. AI Chatbots: A Strategic Guide for B2B Customer Service Branislav Bozanic, 2025-04-01 In 2021 Uber was expanding at a staggering rate but growth came at a cost After pandemic related restrictions eased the multinational American transportation company faced severe driver shortages and regulatory hurdles that slowed the hiring of new drivers Wait times surged prices fluctuated and customer frustration grew One of the biggest bottlenecks was due to customer support The high volume of tickets coming in across multiple channels required manual processing And therein lay their problem Even Uber couldn't keep up with all the customer support demands This resulted in slow response times inconsistent resolutions and high operational costs However their team didn't panic There was an obvious solution AI driven technologies More precisely an AI powered robotic process automation RPA system Uber quickly implemented RPA to categorize tickets and handle repetitive and time consuming customer support tasks The results Processing time for common issues dropped from days to minutes Customer satisfaction skyrocketed with faster response

times Cost savings were massive with the company revenue growing from 17 to 32 billion US dollars the following year 1 Thanks to chatbots and now AI agents automating customer service is getting easier cheaper and more scalable These digital assistants can answer customer questions and automate simple tasks based on a specific set of data But only one of them can also make dynamic decisions plan actions and even learn from experiences offering unparalleled service Curious to know which one is the all around solution that is more suitable for the B2B ecosystem This ebook aims to demystify the differences between AI Agents and AI Chatbots provide their respective benefits and help businesses make the right choice according to their unique customer service requirements

Bots with Feelings Elizabeth Han,Dezhi Yin,Han Zhang,2022 Customer service employees are generally advised to express positive emotion in their interactions with customers The rise and maturity of artificial intelligence AI powered conversational agents also known as chatbots beg the question should AI agents be equipped with the ability to express positive emotion in customer service This research explores how when and why an AI agent s expression of positive emotion affects customers service evaluations We argue that AI expressed positive emotion can influence customers via dual pathways an affective pathway of emotional contagion and a cognitive pathway of expectation disconfirmation We propose that positive emotion expressed by an AI agent vs a human employee is less effective in facilitating service evaluations because of a heightened level of expectation disconfirmation We further introduce customers relationship norm orientation as a novel individual difference variable that affects their expectations toward the AI agent and moderates the cognitive pathway of expectation disconfirmation Results from three laboratory experiments substantiate our claims By revealing a distinctive impact of positive emotion expressed by an AI agent compared with a human employee these findings deepen our understanding of customers reactions to emotional AIs and offer valuable insights for the deployment of AIs in customer service

Quality Customer Support at Scale and unlock the secrets to exceptional customer experiences today [Simplify Your AI Journey: Unleashing the Power of AI with IBM watsonx.ai](#) Deepak Rangarao, Phillip Gerrard, Charley Beller, Carl Broker, Daniele Comi, Lakshmana Ekambaram, Shuvanker Ghosh, Karen Medhat, Payal Patel, Matthew Price, Shirley Shum, Mark Simmonds, IBM Redbooks, 2025-01-31 IBM watsonx™ is IBM's strategic AI and data platform. This book focuses on watsonx.ai, one of the three main components of the platform. IBM watsonx.ai is a next-generation enterprise studio that you can use to train, validate, test, tune, and deploy both traditional ML and new-gen AI capabilities, which are powered by FMs through an open and intuitive user interface (UI). This AI studio provides a range of FMs, training and tuning tools, and a cost-effective infrastructure that facilitates the entire data and AI lifecycle from data preparation through model development, deployment, and monitoring. The studio also includes an FM library that provides IBM-curated and trained FMs. FMs use a large, curated set of enterprise data that is backed by a robust filtering and cleansing process and with an auditable data lineage. These models are trained on language and other modalities such as code, time series data, tabular data, geospatial data, and IT events data. Here are some examples of the model categories: fm code: Models that automatically generate code for developers through a natural language interface to boost developer productivity and enable the automation of many IT tasks; fm NLP: A collection of large language models (LLMs) for specific or industry-specific domains that use curated data to help mitigate bias and quickly make domains customizable by using client data; fm geospatial: Models that are built on climate and remote sensing data to help organizations understand and plan for changes in natural disaster patterns, biodiversity, land use, and other geophysical processes that might impact their businesses. The watsonx.ai studio builds on Hugging Face open-source libraries, which offer thousands of Hugging Face open models and datasets. Users can leverage the power of IBM Granite LLMs along with the latest Mistral, Llama, and other third-party LLMs. It is part of IBM's commitment to deliver an open ecosystem approach that enables users to leverage the best models and architecture for their unique business needs. This IBM Redbooks publication provides a broad understanding of watsonx.ai concepts, its architecture, and the services that are available with the product. Also, several common use cases and scenarios are included that should help you better understand the capabilities of this product. Code samples of common scenarios are available at this GitHub repository: <https://github.com/IBM/watson-machine-learning-samples>. For more examples, which include using InstructLab and AI agents, see this GitHub repository: <https://github.com/IBM/watsonx-ai-platform-demos>.
