Platforms and Artificial Intelligence

Ahmed Bounfour, 2022-03-28

Artificial intelligence (AI) and platforms are closely related. Most investments in AI, especially in critical technologies, are provided by large platforms. This book describes how platforms invest in AI and how AI will impact the next generation of competences, following a twofold approach to do so: on the one hand, the book seeks to understand how platforms for investment in intangibles and AI are organized; but on the other hand, it provides a framework to describe how AI will change jobs and competences in the future. Moreover, the book addresses five main themes:

1. platforms, platformization, and the foundations of their business models
2. artificial intelligence technological tendencies and the policy agenda
3. artificial intelligence productivity and the next generation of competences
4. artificial intelligence productivity and the digital divide
5. artificial intelligence ethics and the post-truth society

The book's content is mostly based on papers presented at the last two installments of the World Conference on Intellectual Capital for Communities. It brings together the views of leading scholars and experts on how artificial intelligence and platformization will impact competences in the near future.
