A Brief History of Artificial Intelligence Michael Wooldridge,2025-09-23 From Oxford s leading AI researcher comes a fun and accessible tour through the history and future of one of the most cutting edge and misunderstood field in science Artificial Intelligence The somewhat ill defined long term aim of AI is to build machines that are conscious self aware and sentient machines capable of the kind of intelligent autonomous action that currently only people are capable of As an AI researcher with 25 years of experience professor Mike Wooldridge has learned to be obsessively cautious about such claims while still promoting an intense optimism about the future of the field There have been genuine scientific breakthroughs that have made AI systems possible in the past decade that the founders of the field would have hailed as miraculous Driverless cars and automated translation tools are just two examples of AI technologies that have become a practical everyday reality in the past few years and which will have a huge impact on our world While the dream of conscious machines remains Professor Wooldridge believes a distant prospect the floodgates for AI have opened Wooldridge s A Brief History of Artificial Intelligence is an exciting romp through the history of this groundbreaking field a one stop shop for AI s past present and world changing future

The International Responsibility of States for AI-enabled Space Activities Stefan-Michael Wedenig,2025-12-22 Artificial Intelligence AI has permeated our every day lives What once was solely a human task has now been taken over by AI May it be credit card approvals customer support financial transactions medical imaging or software development there is AI working behind the scenes Outer space historically always amongst the most developed domains has not remained untouched for long and space

applications have started to increasingly rely on AI. However, this increase in use also leads to a myriad of legal issues, particularly the issue of responsibility and liability under Article VI and Article VII of the Outer Space Treaty and the Liability Convention. Our legal norms, whether they be domestic or international in nature, are ultimately built around human behaviour, and when applied to AI might not function. Should damage caused by an AI-enabled space object arise, it proves difficult to assess the responsibility of the appropriate State party under Article VI of the Outer Space Treaty or the liability of the launching State. While legal literature is primarily concerned with domestic legal issues arising from the use of AI, an in-depth analysis concerning State responsibility and liability for AI-enabled space activities is absent. Space legal literature strongly favours a view advocating for the creation of new hard law in form of new binding legal instruments or the amendment of existing law. Suggestions *de lege ferenda* are often relied on by authors. Given the inherent difficulty in creating new law or amending existing legal instruments, this book proposes to look towards the *lex lata* and argues that the existing legal norms of State responsibility, State liability, and treaty law are sufficient to govern the responsibility of States for their AI-enabled space activities. The present research looks at these issues from a public international law perspective and proposes a solution within the *lex lata*. *Next-Generation AI Methodologies in Education* Cela, Eriona, Vajjhala, Narasimha
