**Characterization of Solid Polymers** S.J. Spells,1994-05-31 Between 1984 and 1994 there has been rapid progress in the techniques used to characterize polymers Entirely new techniques have been developed and the aim of this book is to review this progress and to highlight the areas of research that have been made possible **Characterization of Solid Polymers - New Techniques and Developments** Spells SJ Ed,1994 **Analysis of Thermoset Materials, Precursors and Products** Martin J. Forrest,2003 This report presents an overview of the chemical analysis of thermosets Materials based on thermosets present the analyst with considerable challenges due to their complexity and the wide range of polymer types and additives available This review sets out to present an introduction to the analytical techniques and methods that are used to characterise and carry out quality control work on thermosets investigate the failure of thermosets products and to reformulate thermoset compounds The review is accompanied by around 400 abstracts from papers and books in the Rapra Polymer Library database to facilitate further reading on this subject *Additives in Polymers* Jan C. J. Bart,2005-04-08 This industrially relevant resource covers all established and emerging analytical methods for the reformulation of polymeric materials with emphasis on the non polymeric components Each technique is evaluated on its technical and industrial merits Emphasis is on understanding principles and characteristics and industrial applicability Extensively illustrated throughout with over 200 figures 400 tables and 3 000 references Characterization of Solid Polymers S J Spells,1994-05-31 *Scientific and Technical Aerospace Reports* ,1973 Penjerdel Location and Market Guide of the Delaware Valley ,1977 **Current Engineering Practice** ,1976 **U.S. Government Research & Development Reports** ,1965 *Developments in Polymer Photochemistry* N. manuscripts of the formal presentations given at the Conference The emergence and use of nontraditional materials and the excessive failures and reject rates of high technology materials intensive engineering systems necessitates a new approach to quality control Thus the theme of this year s Thirty First Conference Materials Characterization for Systems Performance and Reliability was selected to focus on the need and mechanisms to transition from defect interrogation of materials after production to utilization of materials characterization during manufacturing The guidance and help of the steering committee and the dedicated and conscientious efforts of Ms Karen Ka100stian Con ference Coordinator and Mr William K Wilson and Ms Mary Ann Holmquist are gratefully acknowledged The continued active interest and support of Dr Edward S Wright Director AMMRC Dr Robert W Lewis Associate Director AMMRC and COL L C Ross Commander Deputy Director AMMRC are greatly appreciated Aviation Week & Space Technology ,1984 **Solid-State NMR III Organic Matter** Bernhard Blümich,1994-11-04 Solid State NMR is a branch of Nuclear Magnetic Resonance which is presently experiencing a phase of strongly increasing popularity The most striking evidence is the large number of contributions from Solid State Resonance atNMR meetings approaching that ofliquid state resonance Important progress can be observed in three areas Methodological developments applications to inorganic matter and applications to organic matter These developments are intended to be captured in three volumes in this series each of them being devoted to more or less one of these areas The present volume on Solid State NMR III is devoted mainly to organic matter The recent developments of deuteron NMR and their applications are reviewed in the first chapter Crosspolarization MAS and dynamic angle spinning are being explored for enhancement of information and sensitivity In addition to the analysis of classical relaxation times and modern 2D spectra detailed dynamic information becomes accessible from investigations of the relaxation time anisotropies The second chapter examines cross polarization in static and rotating solids under conditions of spin diffusion and thermal motion The underlying dipole dipole interaction is further exploited by the techniques described in the third chapter for studies of polymer polymer miscibility Short range techniques are discriminated from long range techniques based on spin diffusion The use ofthese techniques is illustrated by a case study ofPMMAJPVF blends The last chapter addresses novel z methods and applications of two dimensional exchange NMR for investigations of relative molecular orientations polymer morphology molecular dynamics and macroscopic molecular order **Materials & Process Technology** ,1966 Annual Technical Conference Society of Plastics Engineers.
