The Modern Algebra of Information Retrieval Sándor Dominich, 2008-04-03 This book takes a unique approach to information retrieval by laying down the foundations for a modern algebra of information retrieval based on lattice theory All major retrieval methods developed so far are described in detail along with Web retrieval algorithms and the author shows that they all can be treated elegantly in a unified formal way using lattice theory as the one basic concept The book s presentation is characterized by an engineering like approach

[Introduction to Modern Information Retrieval](#) Gobinda G. Chowdhury, 2010 An information retrieval IR system is designed to analyse process and store sources of information and retrieve those that match a particular user s requirements A bewildering range of techniques is now available to the information professional attempting to successfully retrieve information It is recognized that today s information

professionals need to concentrate their efforts on learning the techniques of computerized IR. However, it is this book's contention that it also benefits them to learn the theory, techniques, and tools that constitute the traditional approaches to the organization and processing of information. In fact, much of this knowledge may still be applicable in the storage and retrieval of electronic information in digital library environments. The fully revised third edition of this highly regarded textbook has been thoroughly updated to incorporate major changes in this rapidly expanding field since the second edition in 2004 and a complete new chapter on citation indexing has been added. Unique in its scope, the book covers the whole spectrum of information storage and retrieval including users of IR and IR options, database technology, bibliographic formats, cataloguing and metadata, subject analysis and representation, automatic indexing and file organization, vocabulary control, abstracts and indexing, searching and retrieval, user-centred models of IR and user interfaces, evaluation of IR systems and evaluation experiments online and CD-ROM, IR multimedia, IR hypertext and mark-up languages, web IR, intelligent IR, natural language processing and its applications in IR, citation analysis and IR in digital libraries and trends in IR research. Illustrated with many examples and comprehensively referenced for an international audience, this is an indispensable textbook for students of library and information studies. It is also an invaluable aid for information practitioners wishing to brush up on their skills and keep up to date with the latest techniques.

Intelligent Document Retrieval Udo Kruschwitz, 2006-01-09 Collections of digital documents can nowadays be found everywhere in institutions, universities, or companies. Examples are Web sites or intranets. But searching them for information can still be painful. Searches often return either large numbers of matches or no suitable matches at all. Such document collections can vary a lot in size and how much structure they carry. What they have in common is that they typically do have some structure and that they cover a limited range of topics. The second point is significantly different from the Web in general: The type of search system that we propose in this book can suggest ways of refining or relaxing the query to assist a user in the search process. In order to suggest sensible query modifications, we would need to know what the documents are about. Explicit knowledge about the document collection encoded in some electronic form is what we need. However, typically such knowledge is not available. So we construct it automatically.

Semantics - Foundations, History and Methods Klaus Heusinger, Claudia Maienborn, Paul Portner, 2019-02-19 Get to grips with the fundamentals of semantics research. Written by a team of world-class experts, this book introduces the subject for a broad audience of linguists, cognitive scientists, philosophers, and computer scientists. It explores the core concepts of sentential semantics and includes sections on questions, imperatives, copular clauses, and existential sentences. It also features essential research on sentence types and explains central concepts in the theory of information structure and discourse structure. Now in paperback for the first time since its original publication, the material in this modern classic is an ideal resource for anyone involved in semantics research.
