Mapping Nature across the Americas Kathleen A. Brosnan, James R. Akerman, 2021-10-19 Maps are inherently unnatural Projecting three dimensional realities onto two dimensional surfaces they are abstractions that capture someone's idea of what matters within a particular place they require selections and omissions These very characteristics however give maps their importance for understanding how humans have interacted with the natural world and give historical maps especially the power to provide rich insights into the relationship between humans and nature over time That is just what is achieved in Mapping Nature across the Americas Illustrated throughout the essays in this book argue for greater analysis of historical maps in the field of environmental history and for greater attention within the field of the history of cartography to the cultural constructions of nature contained within maps This volume thus provides the first in depth and interdisciplinary investigation of the relationship between maps and environmental knowledge in the Americas including for example stories of indigenous cartography in Mexico the allegorical presence of palm trees in maps of Argentina the systemic mapping of US forests and the scientific platting of Canada's remote lands

The New Map of Empire S. Max Edelson, 2017-04-24 After the Treaty of Paris ended the Seven Years War in 1763 British America stretched from Hudson Bay to the Florida Keys from the Atlantic coast to the Mississippi River and across new islands in the West Indies To better rule these vast dominions Britain set out to map its new territories with unprecedented rigor and precision Max Edelson's The New Map of Empire pictures the contested geography of the British Atlantic world and offers new

explanations of the causes and consequences of Britain's imperial ambitions in the generation before the American Revolution. Under orders from King George III to reform the colonies, the Board of Trade dispatched surveyors to map far-flung frontiers, chart coastlines in the Gulf of St. Lawrence, sound Florida's rivers, parcel tropical islands into plantation tracts, and mark boundaries with indigenous nations across the continental interior. Scaled to military standards of resolution, the maps they produced sought to capture the essential attributes of colonial spaces: their natural capacities for agriculture, navigation, and commerce, and give British officials the knowledge they needed to take command over colonization from across the Atlantic. Britain's vision of imperial control threatened to displace colonists as meaningful agents of empire and diminished what they viewed as their greatest historical accomplishment: settling the New World. As London's mapmakers published these images of order in breathtaking American atlases, Continental and British forces were already engaged in a violent contest over who would control the real spaces they represented. Accompanying Edelson's innovative spatial history of British America are online visualizations of more than 250 original maps, plans, and charts.

**The True Geography of Our Country** Joel Kovarsky, 2014-07-01 A philosopher, architect, astronomer, and polymath, Thomas Jefferson lived at a time when geography was considered the mother of all sciences. Although he published only a single printed map, Jefferson was also regarded as a geographer owing to his interest in and use of geographic and cartographic materials during his many careers: attorney, farmer, sometime surveyor, and regional and national politician. And in his twilight years at Monticello. For roughly twenty-five years, he was involved in almost all elements of the urban planning of Washington, D.C., and his surveying skills were reflected in his architectural drawings, including those of the iconic grounds of the University of Virginia. He understood maps not only as valuable for planning but as essential for future land claims and development, exploration, and navigation, and continental commercial enterprise. In *The True Geography of Our Country: Jefferson's Cartographic Vision*, Joel Kovarsky charts the importance of geography and maps as foundational for Jefferson's lifelong pursuits. Although the world had already seen the Age of Exploration and the great sea voyages of Captain James Cook, Jefferson lived in a time when geography was of primary importance, prefiguring the rapid specializations of the mid- to late nineteenth-century world. In this illustrated exploration of Jefferson's passion for geography, including his role in planning the route followed and regions explored by Lewis and Clark's Corps of Discovery, as well as other expeditions into the vast expanse of the Louisiana Purchase, Kovarsky reveals how geographical knowledge was essential to the manifold interests of the Sage of Monticello.

**Frontiers of Science** Cameron B. Strang, 2018-06-13 Cameron Strang takes American scientific thought and discoveries away from the learned societies, museums, and teaching halls of the Northeast and puts the production of knowledge about the natural world in the context of competing empires and an expanding republic in the Gulf South. People often dismissed by starchy northeasterners as nonintellectuals—Indian sages, African slaves, Spanish officials, Irishmen on the make, clearers of land, and drivers of men—were also scientific observers, gatherers, organizers, and reporters. Skulls and stems, birds and bugs, rocks and

maps tall tales and fertile hypotheses came from them They collected described and sent the objects that scientists gazed on and interpreted in polite Philadelphia They made knowledge Frontiers of Science offers a new framework for approaching American intellectual history one that transcends political and cultural boundaries and reveals persistence across the colonial and national eras The pursuit of knowledge in the United States did not cohere around democratic politics or the influence of liberty It was as in other empires divided by multiple loyalties and identities organized through contested hierarchies of ethnicity and place and reliant on violence By discovering the lost intellectual history of one region Strang shows us how to recover a continent for science Red Book Alice Eichholz,2004 provides updated county and town listings within the same overall state by state organization information on records and holdings for every county in the United States as well as excellent maps from renowned mapmaker William Dollarhide The availability of census records such as federal state and territorial census reports is covered in detail Vital records are also discussed including when and where they were kept and how Publisher description Bulletin of the Museum of Life Sciences ,1995 *Canal Street* , Ext general view
