Character Of Grain Boundaries Advances In Ceramics Volume 6:

Advanced Mineralogy A. S. Marfunin, 2012-12-06 All existing introductory reviews of mineralogy are written according to the same algorithm sometimes called the Dana System of Mineralogy Even modern advanced handbooks which are certainly necessary include basic data on minerals and are essentially descriptive When basic information on the chemistry structure optical and physical properties distinguished features and paragenesis of 200-400 minerals is presented then there is practically no further space available to include new ideas and concepts based on recent mineral studies A possible solution to this dilemma would be to present a book beginning where introductory textbooks end for those already familiar with the elementary concepts Such a volume would be tailored to specialists in all fields of science and industry interested in the most recent results in mineralogy This approach may be called Advanced Mineralogy Here an attempt has been made to survey the current possibilities and aims in mineral matter investigations including the main characteristics of all the methods the most important problems and topics of mineralogy and related studies The individual volumes are composed of short condensed chapters Each chapter presents in a complete albeit condensed form specific problems methods theories and directions of investigations and estimates their importance and strategic position in science and industry **Fracture**

Mechanics of Ceramics R. C. Bradt, A. G. Evans, D. P. H. Hasselman, F. F. Lange, 2012-12-06 These volumes 7 and 8 of Fracture Mechanics of Ceramics constitute the proceedings of an international symposium on the fracture mechanics of ceramic materials held at Virginia Polytechnic Institute and State University Blacksburg Virginia on June 19-20 and 21 1985 These proceedings constitute the fourth pair of volumes of a continuing series of conferences The theme of this conference as the previous three focused on the mechanical behavior of ceramic materials in terms of the characteristics of cracks particularly the roles which they assume in the fracture process The 78 contributed papers by over 100 authors and co-authors represent the current state of the field They address many of the theoretical and practical problems of interest to those concerned with brittle fracture The program chairmen gratefully acknowledge the financial assistance for the Symposium provided by the EXXON Foundation the Army Research Office the National Science Foundation and the Office of Naval Research Without their support this conference simply would not have been possible The suggestions of Drs J C Hurt R C Pohanka and L Toth were particularly helpful in assuring the success of this symposium Special appreciation is extended to Professor J I Robertson C P Miles Professor of History whose presentation following the banquet on the American Civil War was very well received by the audience Finally we wish to also thank our joint secretaries especially Karen Snider for their patience and help in finally bringing these proceedings to press *Bibliography on the High Temperature Chemistry and Physics of Materials*, 1985 The Brittle-Ductile Transition in Rocks Al G. Duba, 1990 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 56 The roses seem to have a mildew Lucy said as I drank my morning coffee I'll ask Hugh about it flashed through my mind but not past my lips since he's been dead for over

two years I wonder if this isn't typical for his friends and colleagues. Hugh's ability and willingness to help his unselfish cooperation not just in research but in life are what made him special to those who worked closely with him. Many who read this volume are familiar with the varied contributions he made to rock mechanics and to high pressure research. Consistent with his reputation, the things that impressed me when I first worked with Hugh in 1969 were his enthusiasm for work and his ability to keep pressure systems working well. Although these qualities still come to mind when I think of Hugh, the thing that usually remains is a warm feeling of pleasure at having been his friend and shared part of his life.

Structure & Property Relationships for Interfaces ASM International, 1991. This reference collects the latest studies on grain boundaries and other interfaces in a broad range of materials. Areas of coverage include metals, alloys, intermetallics, ceramics, ceramic composites, metal ceramic composites, and YBaCuO superconductors. There are chapters on interface control in

The Selected Works of John W. Cahn John W. Cahn, W. Craig Carter, William C. Johnson, 1998. This book represents a collection of 30 selected papers from the work of John W. Cahn. Dr. Cahn is Senior Fellow at the Materials Science and Engineering Laboratory of the National Institute of Standards and Technology and is widely recognized as a founder of modern theory and thought in materials science. The range of his research included kinetics and mechanisms of metallurgical phase changes, surfaces, interfaces, defects, quasicrystals, thermodynamics, and other areas impacting the fundamental understanding of materials science. Each paper includes a 2-4 page review of the impact and historical perspective of the work. This is an important collection for students, instructors, and scientists interested in materials science.
