Excerpt from Optical Materials Characterization Final Technical Report February 1 1978 September 30 1978 Several techniques are used for measuring the refractive indices of optical materials however as part of this program the measurements of  $n$  have been conducted on two precision spectrometers by the method of minimum deviation Schematic diagrams of both spectro meters are shown in Figure 1 The first spectrometer which contains glass optics is capable of measuring  $n$  in the Visible and in the near infrared to an accuracy of several parts in  $10^6$  The second spectrometer which contains mirror optics is capable of measuring  $n$  from 200 nm in the ultraviolet to 50  $\mu$ m in the infrared to an accuracy of several parts in  $10$  The accuracy depends on specimen quality and size All values of refractive index are measured relative to the refractive index of air  $n_a$  that is we measure  $n/n_a$  The value of  $n_a$  is about over the full wavelength range of measurement About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works      Synthesis and Characterization of a Family of Nonlinear Optical Materials Lawrence L.
