Charles Waterton A Biography:

Charles Waterton Brian W. Edginton, 1996 Charles Waterton 1782 1865 a true English eccentric ironically self styled the most commonplace of men He talked to insects fought with snakes rode an alligator and lived like a monk He was made famous in his own lifetime by publication of his wide ranging travels and natural history observations always fun often perceptive and unfailingly individual One of his more notable contributions to science was the introduction into Europe of curare now an invaluable drug in surgical operations He turned his family estate into an extensive nature reserve long before such things were heard of and threw open his gates to the local populace as long as they understood that birds and animals had security of tenure Waterton wrote three volumes of Essays on Natural History and the best selling Wanderings in South America which has never been out of print since the first publication in 1825 He was a fearsome satirist and pamphleteer attacking prominent figures of his day both with his powerful pen and with his taxidermy skills His simple charm made a mockery of all those enemies who tried to capitalise on his human failings Unlike previous biographies this book is an unabashed celebration of his eccentricity a fond salute to a fine old English gentleman In the centenary year of the Canadian national park which is named after him the life of Charles Waterton should encourage the preservation of what remains of his kind of world and remind us of what the world has lost to insensitivity and greed *Charles Waterton* Julia Blackburn, 1997 Charles Waterton was the first conservationist who fought to protect wild nature against the destruction and pollution of Victorian industrialisation During his lifetime he was famous for his eccentricities but also for his achievements and his opinions A Yorkshire landowner he turned his park into a sanctuary for animals and birds As an explorer he learned to survive in the tropical rain forests of South America without a gun or the society of other white men He was an authority on the poisons used by South American Indians and a taxidermist of note The huge public that read his books included Dickens Darwin and Roosevelt Since his death the memory of Waterton's personal eccentricities has flourished while the originality of his ideas and work has often suffered Using his surviving papers Julia Blackburn has redressed the balance in a biography that restores Waterton to his place as the first conservationist of the modern age *Charles Waterton* James Simson, 2023-07-18 This book is a biography of Charles Waterton a British naturalist who was famous for his pioneering work in the field of natural history It covers his life and achievements including his travels to South America where he studied wildlife and his efforts to preserve the wild animals and habitats of Great Britain The book is a must read for anyone interested in natural history conservation and the history of science This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the

 seemed to take effect in four minutes Conscious as though he would fall the ox set himself firmly on his legs and remained
 quite still in the same place till about the fourteenth minute when he smelled the ground and appeared as if inclined to walk
 He advanced a pace or two staggered and fell and remained extended on his side with his head on the ground His eye a few
 minutes ago so bright and lively now became fixed and dim and though you put your hand close to it as if to give him a blow
 there he never closed his eyelid His legs were convulsed and his head from time to time started involuntarily but he never
 showed the least desire to raise it from the ground He breathed hard and emitted foam from his mouth The startings or
 subsultus tendinum now became gradually weaker and weaker his hinder parts were fixed in death and in a minute or two
 more his head and fore legs ceased to stir Nothing now remained to show that life was still within him except that his heart
 faintly beat and fluttered at intervals In five and twenty minutes from the time of his being wounded he was quite dead His
 flesh was very sweet and savoury at dinner On taking a retrospective view of the two different kinds of poisoned arrows and
 the animals destroyed by them it would appear that the quantity of poison must be proportioned to the animal and thus those
 probably labour under an error who imagine that the smallest particle of it introduced into the blood has almost
 instantaneous effects Make an estimate of the difference in size betwixt the fowl and the ox and then weigh a sufficient
 quantity of poison for a blow pipe arrow with which the fowl was killed and weigh also enough poison for three wild hog
 arrows which destroyed the ox and it will appear that the fowl received much more poison in proportion than the ox Hence
 the cause why the fowl died in five minutes and the ox in five and twenty Indeed were it the case that the smallest particle of
 it introduced into the blood has almost instantaneous effects the Indian would not find it necessary to make the large arrow
 that of the blow pipe is much easier made and requires less poison Charles Waterton of Walton Hall ,1951 *The*
