Château Latour Charles Higounet,1993 **A Modern Approach to Regression with R** Simon Sheather,2009-03-11

This book focuses on tools and techniques for building regression models using real world data and assessing their validity A key theme throughout the book is that it makes sense to base inferences or conclusions only on valid models Plots are shown to be an important tool for both building regression models and assessing their validity We shall see that deciding what to plot and how each plot should be interpreted will be a major challenge In order to overcome this challenge we shall need to understand the mathematical properties of the fitted regression models and associated diagnostic procedures As such this will be an area of focus throughout the book In particular we shall carefully study the properties of residuals in order to understand when patterns in residual plots provide direct information about model misspecification and when they do not The regression output and plots that appear throughout the book have been generated using R The output from R that appears in this book has been edited in minor ways On the book web site you will find the R code used in each example in the text
