The Story of the Dinosaurs in 25 Discoveries Donald R. Prothero, 2019-07-16 Today any kid can rattle off the names of dozens of dinosaurs But it took centuries of scientific effort and a lot of luck to discover and establish the diversity of dinosaur species we now know How did we learn that Triceratops had three horns Why don't many paleontologists consider Brontosaurus a valid species What convinced scientists that modern birds are relatives of ancient Velociraptor In *The Story of the Dinosaurs in 25 Discoveries* Donald R Prothero tells the fascinating stories behind the most important fossil finds and the intrepid researchers who unearthed them In twenty five vivid vignettes he weaves together dramatic tales of dinosaur discoveries with what modern science now knows about the species to which they belong Prothero takes us from eighteenth century sightings of colossal bones taken for biblical giants through recent discoveries of enormous predators even larger than Tyrannosaurus He recounts the escapades of the larger than life personalities who made modern paleontology including scientific rivalries like the nineteenth century Bone Wars Prothero also details how to draw the boundaries between species and explores debates such as whether dinosaurs had feathers explaining the findings that settled them or keep them going Throughout he offers a clear and rigorous look at what paleontologists consider sound interpretation of evidence An essential read for any dinosaur lover this book teaches us to see an ancient world ruled by giant majestic creatures anew [Dinosaur Hunters](#)

David A. E.
