Diophantine Equations Over Function Fields R. C. Mason,2014-05-14 A self contained account of a new approach to the subject   Diophantine Equations over Function Fields R. C. Mason,1984-04-26 Diophantine equations over number fields have formed one of the most important and fruitful areas of mathematics throughout civilisation In recent years increasing interest has been aroused in the analogous area of equations over function fields However although considerable progress has been made by previous authors none has attempted the central problem of providing methods for the actual solution of such equations The latter is the purpose and achievement of this volume algorithms are provided for the complete resolution of various families of equations such as those of Thue hyperelliptic and genus one type The results are achieved by means of an original fundamental inequality first announced by the author in 1982 Several specific examples are included as illustrations of the general method and as a testimony to its efficiency Furthermore bounds are obtained on the solutions which improve on those obtained previously by other means Extending the equality to a different setting namely that of positive characteristic enables the various families of equations to be resolved in that circumstance Finally by applying the inequality in a different manner simple bounds are determined on their solutions in rational functions of the general superelliptic equation This book represents a self contained account of a new approach to the subject and one which plainly has not reached the full extent of its application It also provides a more direct on the problems than any previous book Little expert knowledge is required to follow the theory presented and it will appeal to professional mathematicians research students and the enthusiastic undergraduate   Diophantine Equations Over Function Fields R. C. Mason,1984-04-26 A self contained account of a new approach to the subject   **Unit Equations in Diophantine Number Theory** Jan-Hendrik Evertse,Kálmán Győry,2015-12-30 Diophantine number theory is an active area that has seen tremendous growth over the past century and in this theory unit equations play a central role This comprehensive treatment is the first volume devoted to these equations The authors gather together all the most important results and look at many different aspects including effective results on unit equations over number fields estimates on the number of solutions analogues for function fields and effective results for unit equations over finitely generated domains They also present a variety of applications Introductory chapters provide the necessary background in algebraic number theory and function field theory as well as an account of the required tools from Diophantine approximation and transcendence theory This makes the book suitable for young researchers as well as experts who are looking for an up to date overview of the field   **Value Distribution Theory and Complex Dynamics** William Cherry,Chung-Chun Yang,2002 This volume contains six detailed papers written by participants of the special session on value distribution theory and complex dynamics held in Hong Kong at the First Joint International Meeting of the AMS and the Hong Kong Mathematical Society in December 2000 It demonstrates the strong interconnections between the two fields and introduces recent progress of leading researchers from Asia In the book W Bergweiler discusses

proper analytic maps with one critical point andgeneralizes a previous result concerning Leau domains W Cherry and J Wang discuss non Archimedean analogs of Picard s theorems P C Hu and C C Yang give a survey of results in non Archimedean value distribution theory related to unique range sets the abc conjecture and Shiffman s conjecture L Keen and J Kotus explore the dynamics of the family of f lambda z lambda tan z and show that it has much in common with the dynamics of the familiar quadratic family f c z z2 c R Oudkerk discusses the interesting phenomenon known as parabolic implosion and in particular shows the persistence of Fatou coordinates under perturbation Finally M Taniguchi discusses deformation spaces of entire functions and their combinatorial structure of singularities of the functions The bookis intended for graduate students and research mathematicians interested in complex dynamics function theory and non Archimedean function theory

New Advances in Transcendence Theory Alan Baker,London Mathematical Society,1988-10-13 This is an account of the proceedings of a very successful symposium of Transcendental Number Theory held in Durham in 1986 Most of the leading international specialists were present and the lectures reflected the great advances that have taken place in this area The papers cover all the main branches of the subject and include not only definitive research but valuable survey articles

Algebra, Logic And Combinatorics Shaun Bullett,Tom Fearn,Frank Smith,2016-04-21 This book leads readers from a basic foundation to an advanced level understanding of algebra logic and combinatorics Perfect for graduate or PhD mathematical science students looking for help in understanding the fundamentals of the topic it also explores more specific areas such as invariant theory of finite groups model theory and enumerative combinatorics Algebra Logic and Combinatorics is the third volume of the LTCC Advanced Mathematics Series This series is the first to provide advanced introductions to mathematical science topics to advanced students of mathematics Edited by the three joint heads of the London Taught Course Centre for PhD Students in the Mathematical Sciences LTCC each book supports readers in broadening their mathematical knowledge outside of their immediate research disciplines while also covering specialized key areas **Number Theory, Noordwijkerhout 1983** H. Jager,2006-12-08 Hilbert's Tenth Problem: Relations with Arithmetic and Algebraic Geometry Jan Denef,2000 This book is the result of a meeting that took place at the University of Ghent Belgium on the relations between Hilbert s tenth problem arithmetic and algebraic geometry Included are written articles detailing the lectures that were given as well as contributed papers on current topics of interest The following areas are addressed an historical overview of Hilbert s tenth problem Hilbert s tenth problem for various rings and fields model theory and local global principles including relations between model theory and algebraic groups and analytic geometry conjectures in arithmetic geometry and the structure of diophantine sets for example with Mazur s conjecture Lang s conjecture and B cchi s problem and results on the complexity of diophantine geometry highlighting the relation to the theory of computation The volume allows the reader to learn and compare different approaches arithmetical geometrical topological model theoretical and computational to the general structural analysis of the set of solutions of polynomial equations It would

make a nice contribution to graduate and advanced graduate courses on logic algebraic geometry and number theory

Effective Results and Methods for Diophantine Equations over Finitely Generated Domains Jan-Hendrik Evertse,Kálmán Győry,2022-04-28 This book provides the first thorough treatment of effective results and methods for Diophantine equations over finitely generated domains Compiling diverse results and techniques from papers written in recent decades the text includes an in depth analysis of classical equations including unit equations Thue equations hyper and superelliptic equations the Catalan equation discriminant equations and decomposable form equations The majority of results are proved in a quantitative form giving effective bounds on the sizes of the solutions The necessary techniques from Diophantine approximation and commutative algebra are all explained in detail without requiring any specialized knowledge on the topic enabling readers from beginning graduate students to experts to prove effective finiteness results for various further classes of Diophantine equations   Mathematics in the 21st Century Pierre Cartier,A.D.R.
