Representation Theory and Noncommutative Harmonic Analysis I Alexandre Kirillov, 1994-11-23 This two part survey provides a short review of the classical part of representation theory carefully exposing the structure of the theory without overwhelming readers with details and deals with representations of Virasoro and Kac Moody algebra It presents a wealth of recent results on representations of infinite dimensional groups Operators and Representation Theory P.E.T.

Jorgensen, 1987-12-01 Historically operator theory and representation theory both originated with the advent of quantum mechanics The interplay between the subjects has been and still is active in a variety of areas This volume focuses on representations of the universal enveloping algebra covariant representations in general and infinite dimensional Lie algebras in particular It also provides new applications of recent results on integrability of finite dimensional Lie algebras As a central theme it is shown that a number of recent developments in operator algebras may be handled in a particularly elegant manner by the use of Lie algebras extensions and projective representations In several cases this Lie algebraic approach to questions in mathematical physics and C algebra theory is new for example the Lie algebraic treatment of the spectral theory of curved magnetic field Hamiltonians the treatment of irrational rotation type algebras and the Virasoro algebra Also examined are C algebraic methods used in non traditional ways in the study of representations of infinite dimensional Lie algebras and their extensions and the methods developed by A Connes and M A Rieffel for the study of the Yang Mills problem Cutting across traditional separations between fields of specialization the book addresses a broad audience of graduate students and researchers Representation Theory and Analysis on Homogeneous Spaces Semen

Grigor'evich Gindikin, 1994 A combination of new results and surveys of recent work on representation theory and the harmonic analysis of real and p adic groups Among the topics are nilpotent homogeneous spaces multiplicity formulas for induced representations and new methods for constructing unitary representations of real reductive groups The 12 papers are from a conference at Rutgers University February 1993 No index Annotation copyright by Book News Inc Portland OR

Neumann and Marshall Stone were two giants of Twentieth Century mathematics In honor of the 100th anniversary of their births a mathematical celebration was organized featuring developments in fields where both men were major influences This volume contains articles from the AMS Special Session Operator Algebras Quantization and Noncommutative Geometry A Centennial Celebration in Honor of John von Neumann and Marshall H Stone Papers range from expository and refereed and cover a broad range of mathematical topics reflecting the fundamental ideas of von Neumann and Stone Most contributions are expanded versions of the talks and were written exclusively for this volume Included among Also featured is a reprint of P R Halmos s The Legend of John von Neumann The book is suitable for graduate students and researchers interested in operator algebras and applications including noncommutative geometry

Representations of *-Algebras, Locally Compact Groups, and Banach *-Algebraic Bundles J. M.G. Fell,R. S. Doran,1988-04-15 This is an all encompassing and exhaustive exposition of the theory of infinite dimensional Unitary Representations of Locally Compact Groups and its generalization to representations of Banach algebras The presentation is detailed accessible and self contained except for some elementary knowledge in algebra topology and abstract measure theory In the later chapters the reader is brought to the frontiers of present day knowledge in the area of Mackey normal subgroup analysisand its generalization to the context of Banach Algebraic Bundles
