Dimensions Vol 15 Limits:

Concentration of Maxima and Fundamental Limits in High-Dimensional Testing and Inference Zheng

Gao, Stilian Stoev, 2021-09-07 This book provides a unified exposition of some fundamental theoretical problems in high dimensional statistics It specifically considers the canonical problems of detection and support estimation for sparse signals observed with noise Novel phase transition results are obtained for the signal support estimation problem under a variety of statistical risks Based on a surprising connection to a concentration of maxima probabilistic phenomenon the authors obtain a complete characterization of the exact support recovery problem for thresholding estimators under dependent errors

Institute. Summer School, 2012 This volume is a collection of lecture notes for six of the ten courses given in Buzios Brazil by prominent probabilists at the 2010 Clay Mathematics Institute Summer School Probability and Statistical Physics in Two and More Dimensions and at the XIV Brazilian School of Probability In the past ten to fifteen years various areas of probability theory related to statistical physics disordered systems and combinatorics have undergone intensive development A number of these developments deal with two dimensional random structures at their critical points and provide new tools and ways of coping with at least some of the limitations of Conformal Field Theory that had been so successfully developed in the theoretical physics community to understand phase transitions of two dimensional systems Included in this selection are detailed accounts of all three foundational courses presented at the Clay school Schramm Loewner Evolution and other Conformally Invariant Objects Noise Sensitivity and Percolation Scaling Limits of Random Trees and Planar Maps together with contributions on Fractal and Multifractal properties of SLE and Conformal Invariance of Lattice Models Finally the volume concludes with extended articles based on the courses on Random Polymers and Self Avoiding Walks given at the Brazilian School of Probability during the final week of the school Together these notes provide a panoramic state of the art view of probability theory areas related to statistical physics disordered systems and combinatorics Like the lectures themselves they are oriented towards advanced students and postdocs but experts should also find much of interest
