For all readers interested in biology      **Lamarck's Revenge** Peter Ward, 2018-08-14 A riveting explanation of epigenetics offering startling insights into our inheritable traits In the 1700s Jean Baptiste Lamarck first described epigenetics to explain the inheritance of acquired characteristics however his theory was supplanted in the 1800s by Darwin's theory of evolution by natural selection through heritable genetic mutations But natural selection could not adequately explain how rapidly species re diversified and repopulated after mass extinctions Now advances in the study of DNA and RNA have resurrected epigenetics which can create radical physical and physiological changes in subsequent generations by the simple addition of a single small molecule thus passing along a propensity for molecules to attach in the same places in the next generation Epigenetics is a complex process but paleontologist and astrobiologist Peter Ward breaks it down for general readers using the epigenetic paradigm to reexamine how the history of our species from deep time to the outbreak of the Black Plague and into the present has left its mark on our physiology behavior and intelligence Most alarming are chapters about epigenetic changes we are undergoing now triggered by toxins environmental pollutants famine poor nutrition and overexposure to violence Lamarck's Revenge is an eye opening and provocative exploration of how traits are inherited and how outside influences drive what we pass along to our progeny      [Dinosaurs of the Air](#) Gregory S. Paul, 2002-05 This book synthesises the growing body of evidence which suggests that modern day birds have evolved from theropod dinosaurs of prehistoric times The author argues that the ancestor descendant relationship can also be reversed      **Beyond The Stars: Our Origins And The Search For Life In The Universe** Paolo Saraceno, 2012-07-17 What is the origin of the universe Are we alone in the Universe Using clear and plain language the author explores these two interesting scientific philosophical themes with a broad range of studies including astronomy cosmology chemistry biology geology and planet science The first part discusses the origins of everything from the Big Bang to humankind It follows the long course of evolution from original matter to the formation of more complex structures from the furthest galaxies to the nearest stars from planets to organic molecules from the first and most elementary forms of life through to the reptiles the dinosaurs and the advent of man The second part traces the history of the Earth and evaluates the risks of extinction in the future as predicted by scientists Is the Earth the only habitable planet in the Universe This question initiates the discussion on the importance of the Earth's

position in the solar system and the significance of our geologically alive planet The final part is dedicated to the search for extraterrestrial beings with identifiable life forms It also describes attempts for searching from the past to the near future This remarkable book provides the best answers we have to the epic questions about us and our place in the universe
