Debus,2016-06-21 From

their discovery in the 19th century to the dawn of the Nuclear Age dinosaurs were seen in popular culture as ambassadors of the geological past and as icons of the life through time narrative of evolution They took on a more foreboding character during the Cold War serving as a warning to mankind with the advent of the hydrogen bomb As fears of human extinction escalated during the ecological movement of the 1970s dinosaurs communicated their metaphorical message of extinction urging us from our destructive path Using an eclectic variety of examples this book outlines the three fold evolution of dinosaurs and other prehistoric monsters in pop culture from their poorly understood beginnings to the 21st century

**Greenhouse of the Dinosaurs** Donald R. Prothero, 2009-07-01 Donald R Prothero's science books combine leading research with first person narratives of discovery injecting warmth and familiarity into a profession that has much to offer nonspecialists Bringing his trademark style and wit to an increasingly relevant subject of concern Prothero links the climate changes that have occurred over the past 200 million years to their effects on plants and animals In particular he contrasts the extinctions that ended the Cretaceous period which wiped out the dinosaurs with those of the later Eocene and Oligocene epochs Prothero begins with the greenhouse of the dinosaurs the global warming episode that dominated the Age of Dinosaurs and the early Age of Mammals He describes the remarkable creatures that once populated the earth and draws on his experiences collecting fossils in the Big Badlands of South Dakota to sketch their world Prothero then discusses the growth of the first Antarctic glaciers which marked the Eocene Oligocene transition and shares his own anecdotes of excavations and controversies among colleagues that have shaped our understanding of the contemporary and prehistoric world The volume concludes with observations about Nisqually Glacier and other locations that show how global warming is happening much quicker than previously predicted irrevocably changing the balance of the earth's thermostat Engaging scientists and general readers alike *Greenhouse of the Dinosaurs* connects events across thousands of millennia to make clear the human threat to natural climate change

*Monsters and Monstrosity in Media: Reflections on Vulnerability* Yeojin Kim, Shane Carreon, 2024-04-16 As monstrous bodies on screen signal a wide range of subversive destabilization of the notions of identity and community this anthology asks what meanings monsters and monstrosity convey in relation to our recent circumstances shaped by neoliberalism and the pandemic that have led to the intensified tightening of border controls by nation states the intensive categorization of unidentifiable bodies and subsequent forms of isolations and detachments imposed by social distancing and the rapid transition of sociality from reality to virtual reality Presenting various thinkings along the lines of the body and its representations as cultural text together with popular or recent media productions showing various bodies deemed to be monstrous as they either cross conventionally held borders or stay in liminal spaces such as between human animal human machine virtual bodies corporeal flesh living death and other permeable borders this volume looks into the on screen constructions of the monster and monstrosity not only as they represent notions of difference perceived non belongings and disruptions of traditional identity markers but also as they either conceal various
