

Designation: **A341/A341M – 00 (Reapproved 2011)¹ A341/A341M – 16**

Standard Test Method for Direct Current Magnetic Properties of Soft Magnetic Materials Using D-C Permeameters and the Ballistic-Point by Point (Ballistic) Test Methods¹

This standard is issued under the fixed designation A341/A341M; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

~~NOTE—Corrected text and Fig. 1 editorially in December 2014.~~

1. Scope

1.1 This test method provides dc permeameter tests for the basic magnetic properties of soft magnetic materials in the form of bars, rods, wire, or strip specimens which may be cut, machined, or ground from cast, compacted, sintered, forged, extruded, rolled, or other fabricated materials. It includes tests for determination of the normal induction under symmetrically cyclically magnetized (SCM) conditions and the hysteresis loop (B-H loop) taken under conditions of rapidly changing or steep wavefront reversals of the direct current magnetic field strength. This method has been historically referred to as the ballistic test method. For testing hard or permanent magnet materials, Test Method A977/A977M shall be used.

1.2 This test method shall be used in conjunction with Practice **A34/A34M**.

1.3 This test method covers a range of magnetic field strength in the specimen from about 0.05 Oe [4 A/m] up to above 5000 Oe [400 kA/m] through the use of several permeameters. The separate permeameters cover this test region in several overlapping ranges.

1.4 Normal induction and hysteresis properties may be determined over the magnetic flux density range from essentially zero to intrinsic saturation induction for most materials.

¹ This test method is under the jurisdiction of ASTM Committee **A06** on Magnetic Properties and is the direct responsibility of Subcommittee **A06.03** on Test Methods. Current edition approved May 1, 2016. Published October 2016. Originally approved in 1969. Last previous edition approved in 2000 (2011 as A341/A341M – 00) (2011)¹. DOI: 10.1520/A0341-16.
