Advisory Group for Aerospace Research and Development. Fluid Dynamics Panel. Specialists' Meeting,1990 The AGARD Fluid Dynamics Panel sponsored this Symposium

to provide a survey of the capabilities of the CFD community for gridding complex 3 D configurations The intent was to provide some insight to the present state of grid generation for complex configurations to help assess whether this task presents a long term stumbling block to the routine use of CFD in aerodynamic applications To this end the meeting was structured in five sessions General Surveys Algebraic Grid Generation Block Structured Meshes Multiblock Adaptive Meshes and Unstructured Meshes Twenty two papers from these sessions amply gemonstrated that the viability of a numerical solution depends directly on the quality of the mesh and surface representation as measured by its spacing and resolution Of Particular interest was the mesh generation for complex configurations such as advanced fighter or transport aircraft missiles and space vehicles where complex geometries and or complex flowfields have to be analysed Results from this meeting indicate that geometry discretization and generation of meshes for complex 3 D configurations in aerospace will continue to be time and cost consuming operations fro some time to come *Tokyo Business Today* ,1986 *Proceedings of the International Workshop on Artificial Intelligence for Industrial Applications* ,1988 **VLSI Design** ,1985
