Software Maintenance - A Management Perspective Phaneendra Nath Vellanky, 2007-10-23 Computer systems play an important role in our society Software drives those systems Massive investments of time and resources are made in developing and implementing these systems Maintenance is inevitable It is hard and costly Considerable resources are required to keep the systems active and

dependable We cannot maintain software unless maintainability characters are built into the products and processes There is an urgent need to reinforce software development practices based on quality and reliability principles Though maintenance is a mini development lifecycle it has its own problems Maintenance issues need corresponding tools and techniques to address them Software professionals are key players in maintenance While development is an art and science maintenance is a craft We need to develop maintenance personnel to master this craft Technology impact is very high in systems world today We can no longer conduct business in the way we did before That calls for reengineering systems and software Even reengineered software needs maintenance soon after its implementation We have to take business knowledge procedures and data into the newly reengineered world Software maintenance people can play an important role in this migration process Software technology is moving into global and distributed networking environments Client server systems and object orientation are on their way Massively parallel processing systems and networking resources are changing database services into corporate data warehouses Software engineering environments rapid application development tools are changing the way we used to develop and maintain software Software maintenance is moving from code maintenance to design maintenance even onto specification maintenance Modifications today are made at specification level regenerating the software components testing and integrating them with the system Eventually software maintenance has to manage the evolution and evolutionary characteristics of software systems Software professionals have to maintain not only the software but the momentum of change in systems and software In this study we observe various issues tools and techniques and the emerging trends in software technology with particular reference to maintenance We are not searching for specific solutions We are identifying issues and finding ways to manage them live with them and control their negative impact AI Expert,1987 **Federal Register** ,2013-07 **Artificial Intelligence and Human Performance in Transportation** Dimitrios Ziakkas,Anastasios Plioutsias,2024-10-30 Artificial Intelligence AI is a major technological advancement in the 21st century With its influence spreading to all aspects of our lives and the engineering sector establishing well defined objectives is crucial for successfully integrating AI in the field of transportation This book presents different ways of adopting emerging technologies in transportation operations including security safety online training and autonomous vehicle operations on land sea and air This guide is a dynamic resource for senior management and decision makers with essential practical advice distilled from the expertise of specialists in the field It addresses the most critical issues facing transportation service providers in adopting AI and investigates the relationship between the human operator and the technology to navigate what is and is not feasible or impossible Case studies of actual implementation provide context to common scenarios in the transportation sector This book will serve the reader as the starting point for practical questions regarding the deployment and safety assurance of new and emergent technologies in the transportation domains Artificial Intelligence and Human Performance in Transportation is a beneficial read for professionals in the fields of Human Factors Engineering Aviation
