Artificial Intelligence for Knowledge Management Mieczysław Lech Owoc, Maciej Pondel, 2021-08-05 This book features a selection of extended papers presented at the 7th IFIP WG 12.6 International Workshop on Artificial Intelligence for Knowledge Management AI4KM 2019 held in Macao China in August 2019 in the framework of the International Joint Conference on Artificial Intelligence IJCAI 2019. The 8 revised and extended papers were carefully reviewed and selected for inclusion in this volume. They present new research and innovative aspects in the field of knowledge management such as machine learning, knowledge models, KM and Web knowledge capturing and learning, and KM and AI intersections.

Software and Data Engineering Wenying Feng, Nick Rahimi, Venkatasivakumar Margapuri, 2024-10-18 This book constitutes the proceedings of the 33rd International Conference on Software and Data Engineering SEDE 2024 held in San Diego, California, USA, during October 21-22, 2024. The 14 full papers presented in these proceedings were carefully reviewed and selected from 25 submissions. These papers focus on a wide range of topics within Software and Data Engineering and have been categorized into the following topical sections: Software Engineering and Data Science, Artificial Intelligence.

Data-Centric Artificial Intelligence for Multidisciplinary Applications Parikshit N Mahalle, Namrata Nishant Wasatkar, Gitanjali R. Shinde, 2024-06-06 This book explores the need for a data-centric AI approach and its application in the multidisciplinary domain compared to a model-centric approach. It examines the methodologies for data-centric approaches, the use of data-centric approaches in different domains, the need for edge AI, and how it differs from cloud-based AI. It discusses the new category of AI technology, data-centric AI (DCAI), which focuses on comprehending, utilizing, and reaching conclusions from data. By adding machine learning and big data analytics tools, data-centric AI modifies this by enabling it to learn from data rather than depending on algorithms. It can therefore make wiser choices and deliver more precise outcomes. Additionally, it has the potential to be significantly more scalable than conventional AI methods. Includes a collection of case studies with experimentation results to adhere to the practical approaches. Examines challenges in dataset generation, synthetic datasets analysis, and prediction algorithms in stochastic ways. Discusses methodologies to achieve accurate results by improving the quality of data. Comprises cases in healthcare and agriculture with implementation and impact of quality data in building AI applications. *Proceedings of the International Conference on Technology 4 Education 2024, Volume 1* Shitanshu Mishra, Aditi Kothiyal, Sridhar Iyer, Sameer Sahasrabudhe, Andreas Lingnau, Rita Kuo, 2025-09-26 This is volume one of the proceedings from the International Conference on Technology 4 Education 2024 (T4E 2024) with each section consisting of distinct peer-reviewed research papers making original contributions to research and academia. Using AI Chatbots to Enhance Planning and Instruction (Quick Reference Guide) Monica Burns,2023-06-23 An overview of how teachers can use AI chatbots like ChatGPT to design learning experiences and accelerate their workflow as they learn about emerging technologies

[A Proactive Chatbot Framework Designed to Assist Students Based on the PS2CLH Model](#) Arlindo Almada,2022 Nowadays universities are using new technologies to improve the efficiency and effectiveness of learning and to assist students to enhance their academic performance In fact for decades new ways to convey the information required to teach and support students have slowly been integrated into education This development started decades ago with the popularity of e mails and the Web A review of relevant literature revealed that learning requires more innovative and efficient technologies to cope with natural learning challenges highlighting a need for more effective tools to establish the interaction between humans and machines lecturers

and students In addition the covid pandemic presented additional new challenges for the collaboration interaction of lecturers and students at universities This situation led to a great demand for such tools Researchers have been trying to develop such tools for decades and have made good progress but they are still in their infancy There has been a significant evolution in computer hardware in the last decade leading to advances in AI machine learning and Deep Learning which have made tools such as chatbots more usable However the efficiency and effectiveness of the chatbot are still insufficient to meet many educational needs According to our investigation current chatbots are mainly based on subject knowledge and therefore assist users with answers which take no consideration of their personal circumstances which is essential in education This research aims to design a proactive chatbot framework to assist students The new chatbot framework integrates students learning profiles and subject knowledge making the chatbot more intelligent to improve student learning and interaction more effectively The research consists of two main parts The first part seeks to determine the most effective students learning profiles on the basis of the controllable academic factors which affect their performance The second part develops a chatbot framework to which students learning profiles will be applied Due to the different nature of these two endeavours a hybrid methodology was used in this research The literature on learners characteristics and the academic factors that affect their performance was reviewed in depth and this formed the basis for developing a new PS2CLH psychology self responsibility sociology communication learning and health wellbeing model on which an individual s web profile can be built The PS2CLH model combines the perspectives of psychology self responsibility sociology communication learning and health wellbeing to build a student controllable learning factor model This study identifies the impact of students controllable factors on their achievement It was found that the model was 94% accurate In addition this research raised participant students awareness of PS2CLH perspectives which helped learners and educators to manage the factors affecting academic performance more effectively A comprehensive investigation including a survey showed that the chatbot supported by AI technology performed better and more efficiently in various assistant situations including education However there is still room for improvement in the effectiveness of the education chatbot Therefore the research proposes a new chatbot framework assistant which will integrate students learning profiles and develop components to improve student interaction The new framework uses knowledge from the PS2CLH model AI Deep Learning to build a proactive chatbot for assisting students learning of their academic subjects and their controllable factors that affects students performance One of the principal novelties of the chatbot framework lies in the communication facilitator between student lecturer assistant The proactive chatbot applies multimodality to the students learning process to retain their attention and explain the content in different ways using text image video and audio to assist the students and improve their learning experience effectively Furthermore the chatbot proactively suggests new controllable factors for students to work on including related factors that influence their academic performance Tests of the framework showed that the proactive chatbot demonstrated better

question response accuracy than the current BERT Bidirectional Encoder Representations from Transformers chatbot and presented a more effective learning method for students Abstract
