

6 key steps to create AI software

Step 1 - Discovery Stage

- Identify the problem
- Pick a software company
- Agree on business goals
- Describe the future MVP
- Define a roadmap for the project
- Choose a collaboration model
- Set up a technology stack
- Estimate software development time

Step 2 - Proof Of Concept (PoC) Stage

Creating an AI algorithm and testing selected AI models.

Step 3 - AI Software Prototype Development Stage

Create key screens and features of the AI system, not the entire system at once.

Step 4 - Artificial Intelligence Platform Coding Stage

The program is coded with this in mind:

- An agile project management approach is well-suited here
- An AI system from scratch takes more time
- You can choose some ready-made components to shorten the time to market.

Step 5 - Deployment And Testing Stage

The latest errors are caught and the ability of the AI system to withstand the flow of users is checked.

Step 6 - Get The Artificial Intelligence Program Up And Running

This stage is followed by maintenance services.

International Perspectives of Generative AI in Education Guy Tchibozo, 2025-12-10 This book examines the ongoing emergence of generative artificial intelligence GenAI in education It focuses both on the potential and effects of GenAI and on its limitations risks and challenges Particular emphasis is placed on the impact that GenAI has on pedagogy and knowledge assessment across a range of educational fields and disciplines as well as on teacher preparation

development productivity and workload While artificial intelligence has gradually penetrated the field of education over the last 30 years the emergence of GenAI which we are now witnessing is changing the game From a perspective that transcends national specificities the analyses address all levels of education as well as the development of education policies In terms of epistemology and methodology the work draws on a variety of research frameworks theoretical conceptual empirical and methodologies including qualitative quantitative and mixed methods research This work offers a series of suggestions and recommendations as well as avenues for future research in a range of areas including AI GenAI literacy teacher preparation and development curriculum updating pedagogy knowledge assessment teacher effectiveness learner development education policy and ethics It also warns of the risks posed by GenAI particularly in terms of deskilling breaches of data privacy and research integrity bias social justice ecological sustainability and loss of meaning of the teaching profession

Generative AI and Education B. Mairéad Pratschke, 2024-08-27 This volume addresses the gap in knowledge around generative AI and its applications in education It draws on the recent history of technological innovation and digital pedagogies locating generative AI in the contemporary discourse around education futures It argues that a new hybrid model of education is emerging requiring educational institutions to embed generative AI into course and programme design delivery and assessment It also proposes a shift from a focus on learning as output to learning as a process and explores what that shift might look like Grounded in educational theory it offers actionable pedagogy informed guidance on how to position AI as a collaborator in the construction of learning in a manner that is congruent with the values and aims of education It offers advice based on evidence based digital pedagogy including frameworks for effective teaching and learning with generative AI that enable educators and designers to put these ideas into practice The book also explores the wider context informing this shift connecting narratives from governments and industry leaders on the strategic importance of generative AI and lifelong learning learning agility and future skills that make the case for the integration of competency based assessment into mainstream education Finally going beyond pedagogy and practice it considers some of the broader issues including limitations and ethics and the implications of integrating generative AI into institutional planning and design and includes a sample roadmap for education leaders to start the process of integrating generative AI into their institutions This work approaches the topic of generative AI from the vantage point of educators by addressing themes and concerns that will resonate with professionals in the sector

Cross-Modal Learning: Adaptivity, Prediction and Interaction Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with

information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience
