Akšamija, Almir Karabegović, 2024-09-30 This book is a comprehensive compilation of articles that delve into the forefront of interdisciplinary applications of innovative technologies. It presents the scientific inquiries and outcomes showcased at the 15th Days of the Bosnian Herzegovinian American Academy of Arts and Sciences conference held in Sarajevo, Bosnia and Herzegovina, from June 20 to 23, 2024. The collection highlights the latest advancements and will draw the interest of researchers in diverse domains of engineering, including civil engineering, data science, and geographic information systems, computer science, and artificial intelligence, advanced environmental engineering, and project management, information and communication technologies, and advanced electrical power systems. This book serves as a testament to the ongoing pursuit of knowledge and innovation in these fields, offering insights into the current research landscape and future directions. The contributions not only expand the theoretical foundations but also explore practical applications that address contemporary challenges in technology and engineering. The editors gratefully acknowledge the dedicated efforts of all the symposia chairs of the 15th Days of BHAAAS, whose meticulous planning and scholarly oversight have enriched this book and contributed to its scholarly significance.      **Computational Modeling and Simulation Examples in Bioengineering** Nenad

Filipovic, 2021-12-14 A systematic overview of the quickly developing field of bioengineering with state-of-the-art modeling software. Computational Modeling and Simulation Examples in Bioengineering provides a comprehensive introduction to the emerging field of bioengineering. It provides the theoretical background necessary to simulating pathological conditions in the bones, muscles, cardiovascular tissue, and cancers, as well as lung and vertigo disease. The methodological approaches used for simulations include the finite element, dissipative particle dynamics, and lattice Boltzmann. The text includes access to a state-of-the-art software package for simulating the theoretical problems. In this way, the book enhances the reader's learning capabilities in the field of biomedical engineering. The aim of this book is to provide concrete examples of applied modeling in biomedical engineering. Examples in a wide range of areas equip the reader with a foundation of knowledge regarding which problems can be modeled with which numerical methods. With more practical examples and more online software support than any competing text, this book organizes the field of computational bioengineering into an accessible and thorough introduction. Computational Modeling and Simulation Examples in Bioengineering includes a state-of-the-art software package enabling readers to engage in hands-on modeling of the examples in the book. Provides a background on continuum and discrete modeling along with equations and derivations for three key numerical methods. Considers examples in the modeling of bones, skeletal muscles, cartilage, tissue engineering, blood flow, plaque, and more. Explores stent deployment modeling as well as stent design and optimization techniques. Generates different examples of fracture fixation with respect

to the advantages in medical practice applications Computational Modeling and Simulation Examples in Bioengineering is an excellent textbook for students of bioengineering as well as a support for basic and clinical research Medical doctors and other clinical professionals will also benefit from this resource and guide to the latest modeling techniques
